

Care for Lasting Results

With proper care and maintenance, your shower glass will continue to look beautiful and function for years to come. This guide provides essential tips and advice to ensure its lasting brilliance and optimal performance.

Routine Glass Care:

Consistent daily habits maintain your shower's appearance and prevent buildup:

- **Squeegee Daily:** After every shower, quickly squeegee all glass surfaces to remove water droplets and prevent mineral deposits and soap scum.
- **Wipe Down:** Use a soft towel or microfiber cloth to dry any remaining water from glass, hardware, and vinyl pieces. This helps to prevent residue and mold growth.
- **Ensure Proper Ventilation:** Run your bathroom fan during and after showering (15-20 minutes) or open a window. This minimizes condensation, water spots, and mildew.

Glass & Hardware Care

- **NEVER use Harsh Products:** To protect both your glass and shower hardware, **never use scouring powder, abrasive pads, acid-based cleaners (like many strong tile or rust removers), or sharp instruments.** These aggressive materials can cause irreversible scratches, corrosion, or strip finishes, permanently damaging your investment.
- **Avoid Ammonia-Based Cleaners:** Cleaners containing ammonia will chemically react with and strip the protective finish off your aluminum and brass hardware, leading to unsightly discoloration and wear over time. Always check labels to ensure you cleaners are ammonia-free to preserve your hardware's beauty.
- **Choose the Right Cleaners:**
 - For regular cleaning our **Rex Glass Foaming Glass Cleaner** is specifically formulated to be safe and effective for both the inside and outside of your shower glass. It's designed to cut through light soap scum and water spots without harming finishes.
 - For more stubborn stains and limescale buildup, we recommend our **CSS Limescale Cleaner**. This specialized cleaner works to dissolve tough mineral deposits safely.

Important Note:

While powerful on glass and other shower surfaces, our CSS Limescale Cleaner is concentrated. Always follow product instructions carefully. Avoid direct application to shower hardware to preserve a lasting finish.

Caring for Your Shower Door Vinyl:

Vinyl sweeps and, when utilized, strikes are critical components that aid in water retention.

- **Why They Need Care:** These vinyl pieces collect soap scum, limescale, and even mildew over time. Regular attention helps maintain their effectiveness and appearance.
- **Easy to Clean & Replace:** These compression-fit components are simple to remove for thorough cleaning. While mild soap works for routine cleaning, our **CSS Limescale Cleaner** is highly effective for stubborn buildup. Always rinse and dry before reattaching.
- **Replacement Vinyl Available:** As wear-and-tear items, these pieces don't last forever. Replacing them periodically is essential to maintain optimal water retentions and overall shower door performance. New vinyl can be purchased directly through Rex Glass.

Need More Advice?

Proactive care and consistent maintenance will extend the life of your shower enclosure. If you have further questions about maintaining your shower glass, or to inquire about our CSS Cleaning products and vinyl replacements, our team is here to help!
