

Eco-Guard Care Instructions

While Eco-Guard™ repels liquids, prompt spill treatment ensures the long-term visual freshness of the fabric.

Spot Cleaning & Spill Procedure (Fixed Upholstery)

1. Absorb Promptly: Place an absorbent cloth or paper towel over the spill and press gently to lift surface liquid.
2. Blot Carefully: Gently dab remaining moisture with a clean white cloth. Do not rub, as rubbing forces liquid into the weave.
3. Lightly Rinse: Mist the affected area with clean water to dilute residual liquid.
4. Apply Mild Soap: Apply a small amount of pH-neutral household soap if required.
5. Treat Gently: Dab in light circular motions using a soft cloth. Avoid harsh scrubbing or abrasive tools.
6. Air Dry: Allow the fabric to air-dry naturally away from direct heat sources.

Removable Covers & Machine Washing

- Machine Washing: Machine wash cold or warm on a gentle, delicate cycle (up to 40°C) using a mild detergent free of optical brighteners, bleach, or fabric softeners.
- Drying: Line dry flat in the shade. Do not tumble dry, as high heat can affect the fibers and surface treatments.
- Ironing: Cool iron on the reverse/unprinted side only if necessary (maximum 110°C). Do not steam or iron on high heat.
- Chemicals: Do not dry clean or use harsh solvents, bleach, or chlorine-based cleaners directly on the fabric.

Eco-Guard Care Instructions

Preventative Outdoor Care

- **Protect from Direct Sun:** Keep soft furnishings in covered, undercover, or shaded areas to prolong print vibrancy.
- **Store After Use:** Bring cushions and portable soft furnishings indoors or use protective covers during extended non-use periods.
- **Avoid Water Trapping:** Store cushions vertically or indoors during rainstorms to ensure complete drying and prevent moisture accumulation.
