

Monitor and control your critical on-farm infrastructure from anywhere.

Capture the Information that Matters

All the most critical information that matters to protect your milk is captured by Halo Milk Vat Monitoring (MVM):

- **Vat temperature** – Ensure the chill down profile and long term storage temperatures are within specification.
- **CIP** – Ensure best practices are maintained by monitoring temperature.
- **Primary cooler temperature** – Make sure milk is entering the vat at the right temperature.
- **Plant wash temp monitoring** – Ensure the plant is washed within the required temperature range.
- **Calibration** – Ensure what you see agrees with what your milk processor records.
- **Vacuum** – Monitors vacuum (kPa) to detect seal issues and protect milk quality.
- **Ease of install** – Simple to install, plugable solution.
