

MAXIMISE YOUR CHEMICAL

HALO Chemical Monitoring & Control

Smarten the drum, stop the run-out.

Halo's plug-and-play Chemical Monitoring system gives you absolute, real-time visibility into your chemical levels from anywhere. By replacing manual drum checks with automated tracking and predictive analytics, you streamline your refill schedules, eliminate the risk of critical product run-outs, and slash unnecessary logistics costs before they ever hit your bottom line.

Complete Shed Functionality

- **Precision Level Measurement:** Continuous, accurate tracking of chemical volumes inside individual drums or Intermediate Bulk Containers (IBCs).
- **Predictive Time-to-Empty (Days):** Uses your average historical consumption data to forecast exactly how many days of product you have left, taking the guesswork out of ordering.
- **Logistics & Schedule Optimisation:** Enables highly efficient refilling schedules, allowing you to coordinate deliveries and minimize costly, last-minute freight runs.
- **Minimise Waste:** Helps you track usage trends closely to reduce product wastage, ensure exact dosing compliance, and maximize every drop.
- **Multi-Drum Integration:** Built for complete chemical sheds. View, track, and manage all your different chemical stocks simultaneously via a single, centralized dashboard.
- **Rapid Installation:** A simple, pluggable solution engineered for fast setup with zero disruption to your daily wash or treatment routines.

Smart Configurable Alerts

Get instant, proactive text alerts sent straight to your phone the moment your inventory levels drift:

- **Critical Product LOW:** Triggers immediately when a drum or IBC drops below your safety threshold, giving your team and suppliers plenty of lead time to arrange a refill.
