

MAXIMISE YOUR WATER

HALO Water Monitoring & Control

Complete control, from source to supply.

From tank levels and flow rates to pump automation and pressure tracking, Halo gives you total visibility over your entire water network. Designed with modular flexibility, you can start small with basic flow or level monitoring, or scale up to a fully integrated pump monitoring and remote-control system. Whether deployed individually or in combination to build a complete, holistic farm water ecosystem, Halo helps you detect leaks early, eliminate manual tank checks, prevent empty tanks, and safeguard your stock's welfare.

Complete Network Functionality

- **Continuous Level Monitoring:** Keep tabs on tanks, dams, ponds, and reservoirs, whether local or remote. Know exactly how much water you have left without lifting a lid.
- **Pump Control Essentials:** Provides a robust foundation for automated pump monitoring and remote control, with flexible single or dual-pump configurations to match your setup.
- **Live Flow Meter Tracking:** Keep a close eye on water movement across your property to instantly identify baseline usage and map out efficiency trends.
- **Multi-Source Integration:** Designed for complex infrastructure. View, track, and manage all your water assets simultaneously via a single, centralized dashboard.
- **Easy Installation:** A simple, pluggable solution engineered for fast setup with minimal disruption to your daily farm operations.

Smart Configurable Alerts

Get instant, proactive text alerts sent straight to your phone the moment your water network parameters drift:

- **Flow Rate Breaches:** Triggers immediately if your flow meter detects that consumption has exceeded your maximum threshold within a 24-hour period or custom time frame (your first line of defense against hidden pipe bursts).
- **Critical Level Alerts:** Flags instantly if a primary water tank level drops below your critical LOW threshold or climbs past your maximum HIGH capacity.
- **Effluent Pond & Reservoir Safeties:** Instant notification if a storage pond or reservoir hits HIGH levels (preventing environmental containment breaches) or falls below LOW limits.
