#### CHALLENGES

Before using Beam AI, the preconstruction team at Strack relied heavily on manual processes:

**Time-intensive takeoffs** - Use of Bluebeam and CAD-based Agtek for earthwork takeoffs, requiring direct user input.

instead of client engagement and business development.

Days spent on manual takeoffs

Limited adoption across the team, with only a few members testing the platform.

#### EARLY WINS WITH BEAM AI

Despite being in the early adoption phase, Beam AI has already made a significant impact:

high-level budgeting efforts.

15+ man-hours saved per project on

development, allowing senior leadership to focus on client relationships.

More time for business

Auto-detection of spec details and key notes, ensuring critical details are captured and highlighted.

Ease & confidence in pricing

estimates

User-friendly interface, with initial

users finding it easy to navigate.

More investment in business development

Huge potential for broader adoption, as confidence in the software grows.

bidding is a few months away, but the preconstruction team is already seeing positive results:

Using Beam AI for full-scale

More efficient budgeting and pricing processes.

Seamless integration with existing workflows, replacing fully manual processes.

Time savings for senior leadership, enabling better client engagement.

Beam Al is helping us create faster, more accurate budgets while freeing up time for high-value tasks. We're excited to see its full potential as adoption expands.
