

## COMPETITOR ANALYSIS

# Countfire Assists with Takeoffs. Beam AI Fully Automates Them.

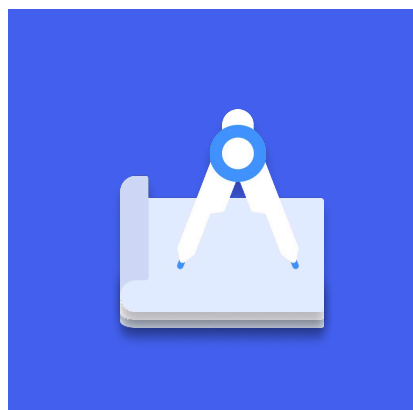

### Covers all trades, not just MEP

Beam AI automates takeoffs across 15+ key trades, making it ideal for GCs, subs, and suppliers. Countfire is only built for electrical and mechanical.

### Reclaim 90% of time spent on takeoffs

Beam AI delivers results within 24-72 hours, freeing up days you would otherwise spend validating incomplete outputs. Let AI auto-detect specs, notes, and summaries for you.

### Scales with you

Beam AI can automate multiple takeoffs simultaneously and is not dependent on estimator bandwidth. Pursue more work and push 2x more bids without adding headcount.

### Human QA checks

Beam AI's outputs are QA-checked by humans, ensuring  $\pm 1\%$  accuracy and bid-readiness. Countfire relies on the user to manually validate outputs using their multi-step internal QA process.

# Beam AI vs Countfire:

## Feature-by-feature comparison

| Features                  | Beam AI  | Countfire   |
|---------------------------|--|---|
| Trade Coverage            | <div> 15+ key trades - Including electrical, civil, HVAC, utilities, concrete, steel, plumbing, etc</div>                                 | <div> Primarily electrical and mechanical counts and symbols</div>   |
| Mechanical/ HVAC Coverage | <div> Full coverage including: Ductwork, pipework, fittings, equipment, controls, insulation, tagging, etc.</div>                        | <div> Automation applies only to symbol recognition, not full-scope MEP/ HVAC.</div>                                      |
| Electrical Coverage       | <div> Comprehensive: fixtures, devices, wiring, conduits, low voltage, tagging, etc.</div>  | <div> Limited to symbol counts; lacks support for wiring, tagging, or system-level mapping.</div>                        |
| Scope of AI Automation    | <div> Fully automated: Quantity detection, spec reading, addenda comparison. Just Upload → Add scope → Get done-for-you takeoffs.</div> | <div> Semi-automated &amp; user-driven: Symbol selection is automatic, but zone setup and drawing edits are manual</div> |
| Estimator Effort          | <div> Zero estimator effort post upload</div>   | <div> Estimator selects symbols, zones, does QA, and edits outputs</div>   |
| Human QA                  | <div> All takeoffs reviewed by trained Quality Assurance team (guarantees ±1% of your in-house accuracy)</div>                          | <div> User is responsible for validating symbol counts and estimating kits</div>   |
| Speed of Delivery         | <div> 24–72 hours turnaround on complete takeoffs</div>   | <div> Estimator-driven speed; depends on team capacity and plan complexity</div>   |
| Takeoff Capacity          | <div> Can handle multiple takeoffs simultaneously</div>   | <div> One plan at a time</div>   |
| Revision Handling         | <div> Auto-detects changes and generates Excel variance reports between versions</div>  | <div> Can auto-count revisions, but estimators manage updates manually</div>   |
| Output Format             | <div> PDF Exports &amp; Excel formatted to CSI codes and trade scopes</div>   | <div> Excel/PDF exports, customizable smart reports</div>  |
| Platform                  | <div> Cloud-based, no install required</div>  | <div> Cloud-based, works on Mac/PC</div>   |

# Trade-Specific Feature Comparisons

## Mechanical/ HVAC

| Features   | Beam AI | Countfire |
|--|---------|-----------|
| Ductwork (All Types: Rectangular, Round, Spiral, Oval) | ✔       | ✘         |
| Pipework & risers                                      | ✔       | ✘         |
| Fittings (Elbows, Tees, Reducers, Transitions)         | ✔       | ✘         |
| Air Terminals (Diffusers, Grilles, Etc.)               | ✔       | ✘         |
| HVAC Equipment (AHUs, RTUs, VFDs, Etc.)                | ✔       | ✘         |
| Dampers (Fire, Smoke, Gravity, Etc.)                   | ✔       | ✘         |
| Accessories (access doors, isolators, attenuators)     | ✔       | ✘         |
| Controls (Thermostats, Sensors, Etc.)                  | ✔       | ✘         |
| Ductwork weight (SMACNA calc)                          | ✔       | ✘         |
| Insulation surface area                                | ✔       | ✘         |
| Pressure class tagging                                 | ✔       | ✘         |
| System-wise tagging (Supply/Return, RTU/AHU)           | ✔       | ✘         |

# Electrical

| Features   | Beam AI | Countfire                                  |
|--|---------|--|
| Fixtures & Panels (Light Fixtures, Switchgear, Transformers) | ✓       | ⚠ Partial – Limited symbol counts          |
| Lighting control systems (sensors, dimmers)                  | ✓       | ⚠ Partial – Only symbols, not model-based  |
| Wiring Devices (Receptacles, Floor Boxes)                    | ✓       | ✗  |
| Low Voltage Systems (Fire Alarm, CCTV, BAS)                  | ✓       | ✗  |
| Conduits, Feeders, Cable Trays                               | ✓       | ✗  |
| Power & Lighting Branches                                    | ✓       | ✗  |
| Home-runs  | ✓       | ✗  |
| Tagging: Area, Phase, Zone                                   | ✓       | ✗  |
| System-wise grouping & summaries                             | ✓       | ⚠ Limited – Must be built manually by user |
| Quantity + Spec extraction from notes/schedules              | ✓       | ✗  |

# Why Should You Invest in Beam AI

## Reclaim 90% time spent on takeoffs

Let AI do the takeoffs so you can relocate bandwidth to bidding on more jobs, refining proposals, getting better pricing from suppliers, and other high-value tasks.

## Send out up to 30% more bids

Don't waste time fixing AI outputs. Beam AI gives you ready-to-use, Human QA-checked takeoffs so you can respond to more jobs, faster.

## AI handles the details

Beam AI Auto-detects and updates all spec changes; no manual effort required, AI does the job for you.

# Automate Your Takeoffs With Beam AI

Over 900+ businesses across US & Canada trust Beam AI for fully done, automated takeoffs. Join this community today!
