COLLAB FERTILITY

Schedule your virtual consultation!

State of the art fertility care for international patients

Located in the San Francisco Bay Area, Collab Fertility welcomes patients traveling from around the world for personalized, physician-led fertility care. Our advanced IVF laboratory, exceptional success rates, and coordinated international patient support help make each step of treatment clear, compassionate, and highly individualized.

Why international patients choose Collab

Personalized treatment plans

Each treatment plan is designed around the patient's medical history, fertility goals, test results, timeline, and personal circumstances.

Physician-led care

Patients work directly with Dr. Thalia Segal throughout their fertility journey rather than being passed among a rotating group of providers.

Advanced IVF laboratory

Our laboratory combines advanced technology, rigorous quality protocols, and expert embryology care to support each embryo's development.

Academic & clinical expertise

Our physician and laboratory leadership bring world-class expertise to every case, with leadership experience and advanced training at UCSF and other leading medical institutions.

Dedicated international patient support

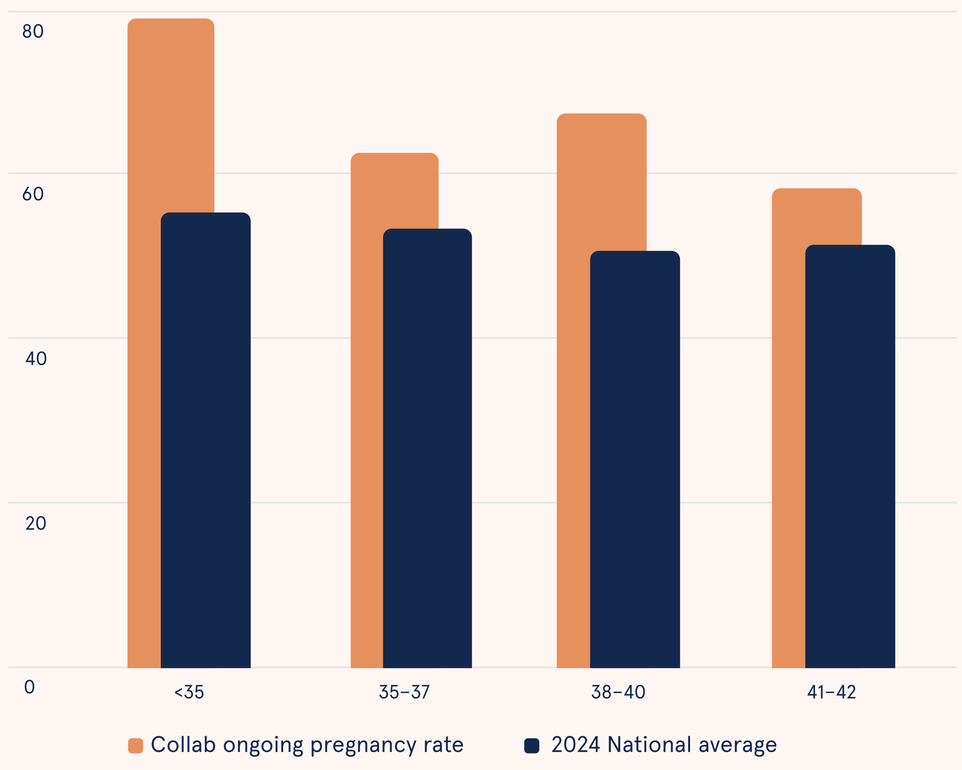

Our knowledgeable patient liaison offers Mandarin, Cantonese, and Taiwanese language support, helping international patients feel informed, supported, and confident from their first consultation through treatment.

Experienced third-party reproduction team

Our dedicated coordinator, Angela, guides patients through donor egg and surrogacy arrangements, working with trusted agencies, attorneys, and psychologists to coordinate care from start to finish.

Across every age group Collab Fertility exceeds the national average

2025–PRESENT COLLAB PREGNANCY & LIVE BIRTH RATES USING PGT-A-TESTED FROZEN EMBRYOS VS. 2024 NATIONAL AVERAGE
