

Everything You Need to Know About Zenzap Integrations

Your team already uses tools for sales, projects, support, scheduling, and more. The problem is everyone has to check five different apps to know what's going on, and by the time you get the update, the moment to discuss it has passed.

Zenzap brings those updates into your work communication. When something happens in another tool, your team sees it in the chat where they can actually talk about it and decide what to do.

No more app-switching. No more delayed reactions. Everything your team needs to know comes to where they already are.

How Integrations Work

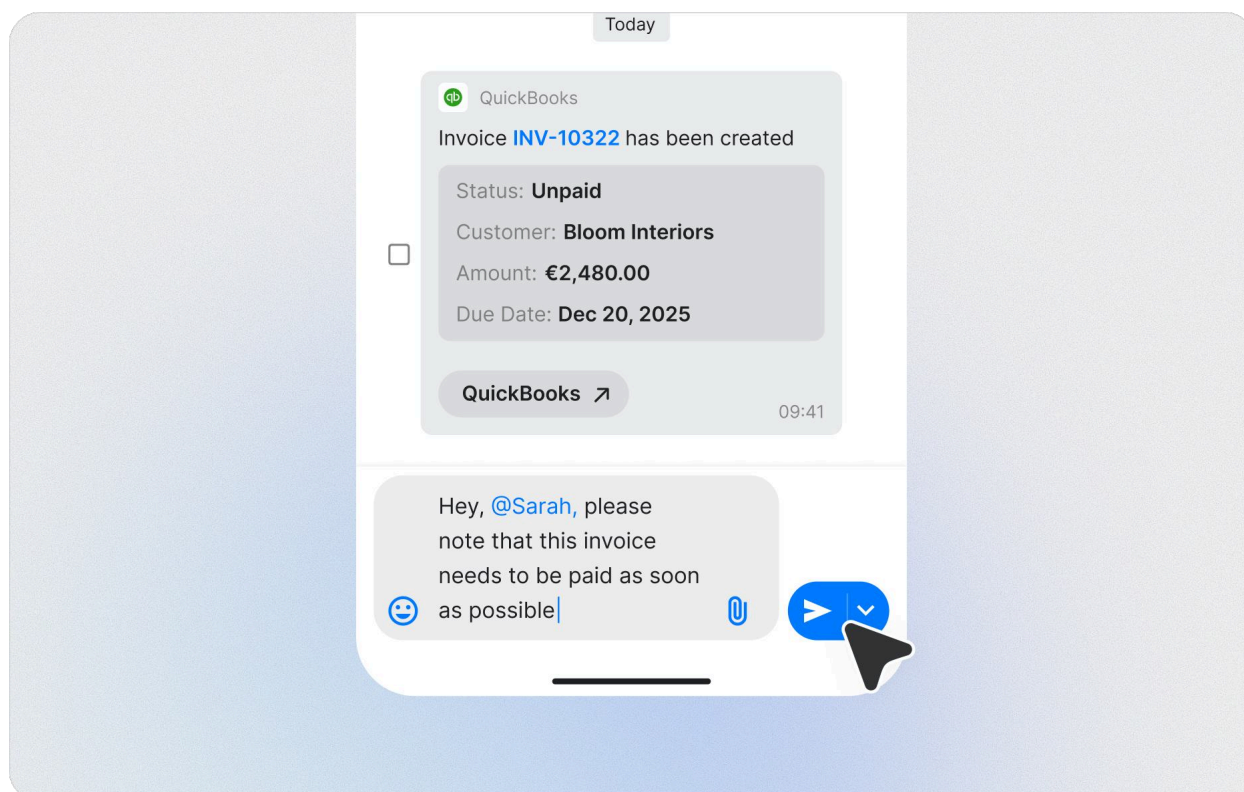

Automatic updates in your chats

When something happens in a connected tool - a new lead, a completed task, a support ticket, a new order - that info is automatically sent to the designated Zenzap chat.

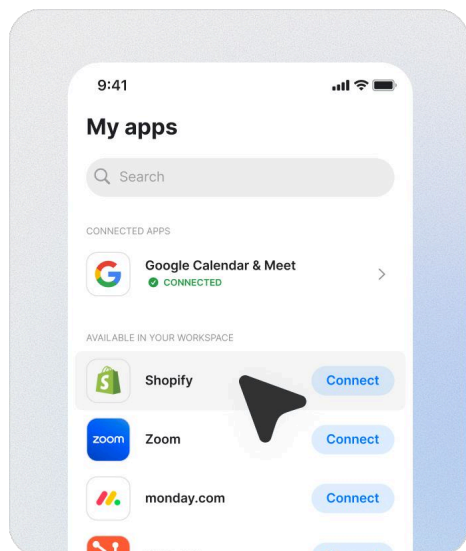

Turn updates into discussions

Updates land in chats where your team can respond, ask questions, @mention the right people, and decide what to do next. The notification becomes a conversation becomes action, all in the same place.

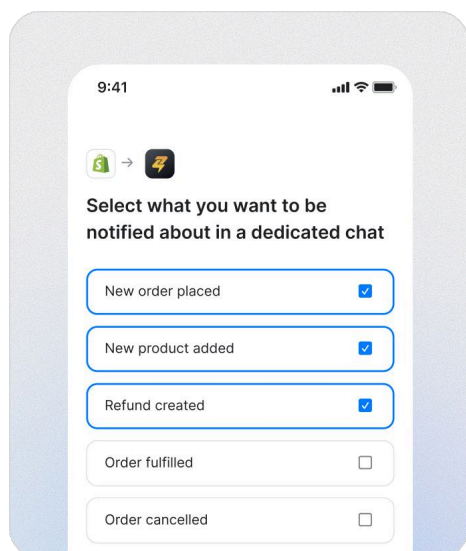

How to Connect an Integration

01

Connect your tools

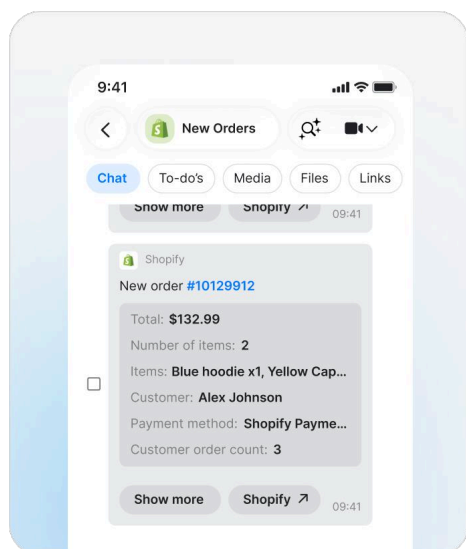

Go to 'My Apps' in your workspace. Choose the tool you want to connect and log in with your credentials for that tool.

02

Choose what you want to see

Pick which events from each tool should create messages in Zenzap.

03

Updates appear automatically

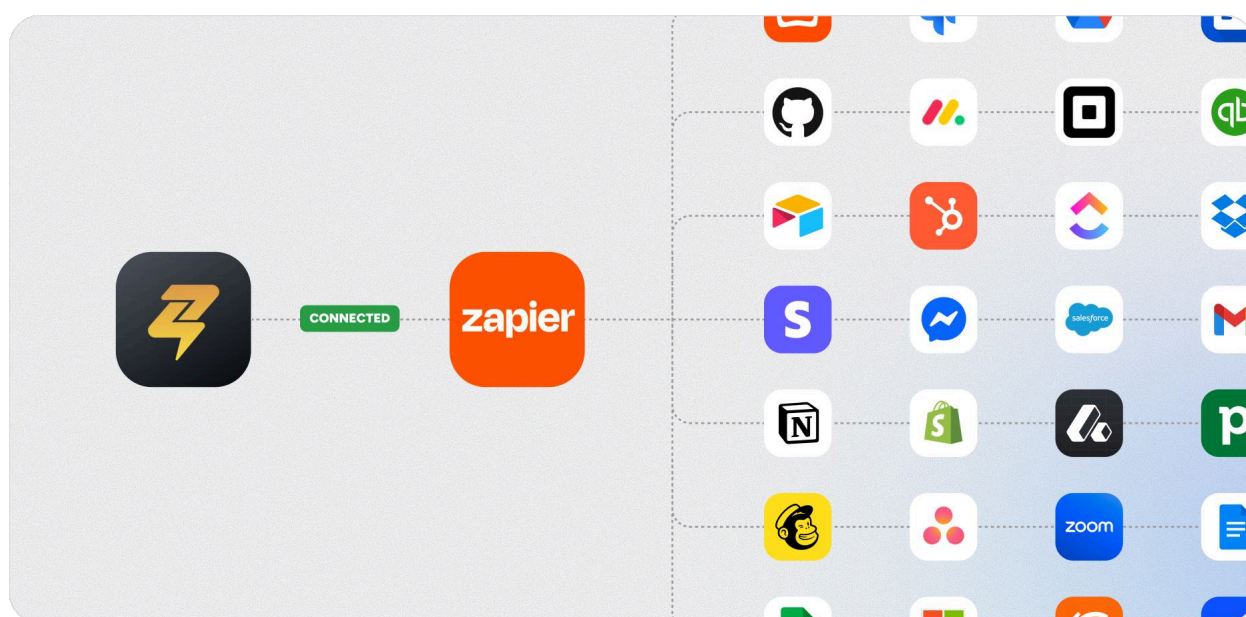

Once connected, updates from your integrated tools appear in your Zenzap chats automatically.

Available Integrations

Connect tools like your project management software, sales and CRM platforms, payments and POS systems, e-commerce platforms, accounting systems, developer tools, and more.

Thousands more through Zapier

Connect Zenzap with Zapier to access thousands of additional apps and create custom workflows.

Custom Integrations with Open API

Build exactly what you need

Have an internal tool or a specific workflow that's unique to your company? Use Zenzap's open API to build custom integrations that fit your exact processes.

Technical flexibility

The API makes it straightforward to connect your proprietary systems or create workflows that match your specific business needs.

A screenshot of a 'Create API key' form. It includes a 'Display photo (optional)' section with a 'YOUR APP' icon and an 'Upload' button. Below is a 'Display name' input field containing 'Your Custom App'. The 'Permissions' section has a dropdown menu set to 'Read and write'. At the bottom are 'Cancel' and 'Create' buttons.

Documentation available

Full API documentation is available so your technical team or developer can build integrations that work exactly how you need them to.
