

## **Junior Software Developer (T-Level Industry Placement)**

Location: Virtual (with occasional industry visits & events)

Placement Duration: 45 days (October – December 2025)

Organisation: Doxabeta

### **About the Role**

Doxabeta is seeking enthusiastic Junior Software Developers to join our dynamic digital innovation team as part of your T-Level placement. You'll contribute to real-world projects, helping design and build Doxabeta's own proprietary platform, web applications, and low-code solutions that solve real industry problems.

This is a practical opportunity to experience how software teams work in modern tech environments, develop coding and problem-solving skills, and build a professional portfolio to boost your employability.

### **What You'll Do**

- Work on live digital projects including low-code website builds and entry-level JavaScript features.
- Collaborate with mentors, Scrum Masters, and team members in Agile sprints.
- Participate in daily stand-ups, sprint planning, and retrospectives to understand how software teams deliver.
- Help analyse business requirements, design user interfaces, and create simple prototypes using Figma & Lucidspark.
- Learn and apply front-end development principles (HTML, CSS, JavaScript basics).
- Assist in testing and refining digital solutions, logging bugs, and improving user experience.
- Document your work and contribute to team reviews, demos, and showcases.

### **Ideal Candidate**

- Currently studying a Digital T-Level (Software Development specialism preferred).
- Keen interest in web development, software design, and solving real-world problems with technology.
- Basic understanding of JavaScript (or willingness to learn).
- Good communicator, proactive learner, and comfortable working in a collaborative virtual team.
- Curious about digital careers and motivated to build a professional portfolio.

### **What You'll Gain**

- Hands-on project experience aligned with the T-Level Digital Production, Design & Development curriculum.

- Mentoring from industry professionals and exposure to real Agile software practices.
- Opportunity to build and deploy a real-world project to add to your CV & LinkedIn profile.
- Employability training (CV writing, LinkedIn, interviews).
- Insight into global digital careers through Doxabeta's industry panels & exchange programmes.

### **Tools & Tech You'll Use**

- Low-code, No code platforms (Webflow, WordPress/Elementor, Bubble).
- JavaScript basics (DOM manipulation, validation).
- Google Workspace, Asana (project management), Figma & Lucidspark (design & mapping).
