The SIL Barcelona 2026, an event for logistics, transport, and supply chain, took place from June 3 to June 5 in Barcelona. Leviahub was represented with a booth and reported a high number of visitors according to a statement. Professionals, companies, and institutions from around the world showed interest in the company's solutions for the digitalization of the supply chain, as reported by Leviahub.

At booth D414, Leviahub presented a range of offerings aimed at promoting digital transformation in logistics. According to Leviahub, solutions for document digitalization, e-CMR, transport management systems (TMS), data interoperability, and the application of artificial intelligence in logistics and transport processes were particularly in demand.

### New technology center for the supply chain

Another aspect of the event highlighted by Leviahub was the introduction of the new Spanish Supply Chain Technology Center, which has emerged from the acquisitions of GSi Software, Hedyla, and Master Informatica. This project aims to strengthen Leviahub's presence in Europe and expand the range of solutions in the logistics and transport sector.

The presentations held during the SIL addressed topics of growing importance for the industry, according to the company: These included information quality in transport systems, the digitalization of customs processes, document automation, and the use of artificial intelligence.
