

A REAL HERO OUR E-MAN SYSTEM

imagine you could manage your combined heat and power plant plus boiler plus buffer storage plus 6 mixer circuits plus 1 domestic hot water charging system in a single control system! and the whole thing out of the box, without any major planning or the like.

our E-MAN energy manager provides exactly that. E-MAN is a doer, Swabian thorough and without many words. install, and cost-effective at the same time: E-MAN is already set up, is fully modular and only needs to be parameterized to the given conditions on site.

WHAT'S IN IT?

- the basic configuration of the system can handle 1 bhkw, control, regulate and manage 1 boiler, 1 buffer storage tank and 2 mixer circuits
- in the full expansion stage, 2 ghcs, 2 boilers, up to 6 additional mixer circuits, a 2nd buffer cylinder and the domestic hot water charging system can be integrated as options*.
- fully wired system for easy installation on site
- simple and intuitive web-based operation, also available with 10" touch web panel on request
- optional remote maintenance system for fast support or updates

WHAT'S IT ABLE TO?

- release for the self-regulating CHP unit
- release | setpoint specification of the boiler systems | output-based selection of the boilers | temperature-controlled
- control of the temperature in the buffer tank to 6 temperature zones
- analog or digital mixer circuits | temperature-controlled or fixed setpoint control
- analog or digital pumps in suitable combination with the mixers | temperature-controlled or fixed setpoint control

WHAT'S IT GOOD FOR?

- modular control and regulation of heat generators, buffer storage tanks, heating circuits, pumps and valves
- plug-and-play complete system with all the necessary components already integrated
- adaptable to the most diverse scenarios
