TRAVELSOFT BRINGS TRAVELPORT AIRLINE CONTENT TO 400+ AGENCIES VIA ORCHESTRA

- The integration makes Travelport's content available across Travelsoft's platforms, enhancing airline options and operational efficiency for European travel agencies.

LONDON – [Travelport](#), an intelligent travel infrastructure company that powers travel bookings for millions of travelers worldwide, and Travelsoft, a leading travel technology Software-as-a-Service (SaaS) company, have announced the successful integration of Travelport's Trip Services API platform via Orchestra, the Transport Hub across the Travelsoft Group.

Orchestra enables travel companies to manage and distribute a comprehensive portfolio of leisure travel products in real time. It plays a central role within the Travelsoft ecosystem, powering the Travelsoft Transport Hub, a shared infrastructure that aggregates airline content and distributes it across the group's various travel platforms.

Through this integration, Travelport's airline content, including, both traditional EDIFACT and modern NDC, is now available within Orchestra and Travel Compositor, Travelsoft's worldwide dynamic packaging platform. The rollout will progressively extend to the other group platforms, including airQuest, Atcore, Tigerbay, Traffics, Travel Connection Technology, as well as Travelsoft Services, the group's consolidation solution.

As a result, Travelport will expand its reach across Europe, making its content available to more than 400 travel agencies through the Travelsoft ecosystem.

"This integration represents a strategic milestone in our European expansion," said **Fred Lindgren, Vice President Sales at Travelport**. "By collaborating with Orchestra and the broader Travelsoft ecosystem, we're delivering our industry-leading NDC and traditional content to a diverse network of travel technology platforms and their agency customers across multiple markets."

"Bringing Travelport's content into the Orchestra platform allows us to strengthen our air content offering," said **Mikel Otxandorena, VP Hospitality & Transport at Orchestra (Travelsoft Group)**. "As the foundation of our Transport Hub was built within Orchestra, it allows us to distribute enriched airline content across the group's platforms while giving our clients access to a broader and more competitive range of airline options."

Travel companies using Orchestra and other Travelsoft platforms are expected to gain expanded airline content and enhanced operational efficiency early on, with the collaboration likely to continue evolving and broadening over time. As development has progressed, the collaboration has expanded to include post-sale servicing activities – such as exchanges, involuntary changes, and ancillary services – alongside

ticketing, upsell, and multi-city booking capabilities. Together, these enhancements provide agencies with a more comprehensive and competitive toolkit for managing their airline business.
