**Summary table**

|                                 |     | There is no evidence that climate change is caused by human activity | The UK should only act on the environment if other countries agree to play their part | People need to do more in their own lives, like recycling more or stopping using plastics | To protect the environment we need to completely change the way we live, such as stopping eating meat or greatly reducing the number of flights we take | Actions taken by individuals will have no noticeable impact on climate change | I do everything I can to reduce my impact on the environment | The air quality in my area has got worse in recent years | We need to take serious action on climate change, even if it means that things like energy, travel and food become more expensive |

**Summary table**

|                                 |     | If you have nothing to hide, you have no reason to worry about the introduction of ID cards | I trust the security services to only use surveillance powers to tackle crime and prevent terrorism | Minority ethnic and religious groups are often unfairly discriminated against by the police in the actions they take to prevent terrorism | If we want to be safer we have to accept some element of surveillance in public places in our society (e.g. CCTV cameras) | Education and community outreach are the most effective tools in the fight against radicalisation and terrorism | I am as worried about the threat of far-right extremists as about religious extremists | Police need to be given more powers in order to protect the UK against terrorism (e.g. increased powers to monitor people's online activity and communication) | The government needs to work with minority communities when attempting to tackle terrorism in the UK |

**Summary table**

|                                 |     | We would be able to reduce violent crime if we created more jobs for young people, especially for those from tough backgrounds | Long prisons sentences for violent crime are an effective deterrent | The level of violent crime in the UK is increasing | A bad upbringing or lack of opportunities is no excuse for committing crime | Harsher sentences for criminals will reduce the amount of violent crime in the UK | Giving children and young people more to do would reduce violent crime | The main purpose of the criminal justice system should be to protect the public, not to rehabilitate criminals | I want there to be more police on the streets, even if this means I pay more through higher taxes |

|                                 |     | The Government should remove the charitable status of private schools and charge VAT on the cost of private school fees | Opening up more grammar schools across the UK would ensure that the brightest children can get the best education possible | Grammar schools ultimately only benefit the children of middle-class parents | Teachers are increasingly too burdened by bureaucracy to think about their students | Schools have become too focused on teaching children to pass exams | We should pay teachers much more to teach in the worst performing schools | The thing that matters most to me is getting the best education for my children or grandchildren | The schools in my local areas generally provide a good education for all children |

|                                 |     | The UK Government unfairly prioritises investment in London and the South East | The Government has not done enough to enable industries to thrive around the UK - for example creating good transport links with other business centres | There should be penalties for companies that decide to move jobs overseas | If people want better job opportunities, it is up to them to move to where those jobs are | It is not within the Government's power to guarantee that there will be decent jobs in all areas of the UK | High immigration to the UK has undercut wages and reduced job opportunities in my local area | There are enough jobs with good pay and working conditions available for me in my local area | Government should shift investment to poorer areas to create more jobs there, even if this means that the economy as a whole is worse off |

**Summary table**

|                                 |     | We need more free trade as this will make the UK richer | The average member of the public has not benefitted from globalisation and free trade | When the country as a whole gets richer, everyone in the country benefits | Trade is a complex area and it is best left to experts in the government to sort it out | Free trade is good for the UK economy, which means that it is good for me personally | We should protect UK jobs and businesses from free trade as much as possible, even if this means that the price of goods from overseas goes up |

Q18. How much do you agree or disagree with the following statements?

Base: All respondents

What people call 'compromise' in politics is really just selling out on one's principles
