| Notes                                                                                                         |                                                                                   |                                                                                   |                                                                                   |                                                                                   |                                                                                   |                                                                                   |                                                                                   |                                                                                   |                                                                                    |                                                                                     |                                                                                     |                                                                                     |
| Unsignalized Delay for [EBR, WBR] is excluded from calculations of the approach delay and intersection delay. |                                                                                   |                                                                                   |                                                                                   |                                                                                   |                                                                                   |                                                                                   |                                                                                   |                                                                                   |                                                                                    |                                                                                     |                                                                                     |                                                                                     |

## ***Appendix C***

### ***Aquatic Center Trip Generation Development***

# **AQUATIC CENTER TRIP GENERATION ESTIMATES**

*Trip Generation Manual, 12<sup>th</sup> Edition* (Institute of Transportation Engineers, 2025) does not provide trip rates specific to an aquatic center like that proposed at the Project Site. Therefore, a trip generation study was prepared to develop the appropriate trip generation rates for use in estimating Project Site trips. This Appendix summarizes the process and results of the trip generation study.

## **DATA COLLECTION**

The trip generation study reviewed four municipal aquatic facilities located in Southern California that were selected by City staff and determined to be comparable to the proposed City Park Aquatic Center. The selected facilities included:

- Community Services, Community Recreation Center in Temecula, CA
- Westwind Community & Aquatic Center in Ontario, CA
- Rialto Fitness Center, Tom Sawyer Swimming Pool in Rialto, CA
- Santa Ana Community Services, Jerome Pool in Santa Ana, CA

Each of the selected aquatic facilities are currently operating as part of a municipal community recreation center.

## **Operational Information**

In order to understand the operational characteristics and isolate the aquatic uses from the other community recreation uses, operational data was requested from each facility with assistance from the respective staff. The operational data included: .

- Size of facility (i.e. building footprint in square feet and pool capacity in gallons)
- Program schedule(s) for Summer 2025 sessions

- Program statistics (e.g. number of classes, class attendance capacities, instructors per class, open/non-programmed session participation trends, seasonal trends, etc.)
- Operational capacities (e.g. person limit in the water)
- Operating hours
- Staffing information (e.g. staffing levels and shift schedules, etc.)
- Other general facility observations

The general characteristics of the studied facilities indicated that each facility was open Monday through Friday generally between 8:00AM and 8:00PM. During these times, a combination of programmed classes and open/non-programmed open swim sessions were offered. Each facility was also open on Saturday generally between 9:00AM and 5:00PM but with variable operating times. Saturdays were generally comprised of open/non-programmed sessions with limited programming.

### **Facility Observations/Operational Assumptions**

Further qualitative information was provided by the respective facilities to develop operational assumptions for the trip generation rate development:

- Staff at each facility noted that scheduling during a summer session generally represented peak operating conditions during the year. Non-peak operations were generally variable among the facilities due to facility characteristics (e.g., indoor vs outdoor pool), but overall activity generally dropped when local schools were in session.
- Due to the variability of weekday programming, staff also provided input on the typical operating day of their respective facilities. Those days that offered a typical number of programmed classes/open sessions were identified as typical days versus those days that offered a reduced number of programmed classes/open sessions and/or third-party usage.
- Each facility generally scheduled classes during weekday mornings and afternoons and had open sessions during the midday to accommodate users. Programming on Saturdays tended to have fewer classes than weekdays with open sessions offered during the midday to afternoon period.
- Staff at each facility provided qualitative observations of the typical arrival/departure patterns for class participants and open session attendees. Participants generally arrived an average of 30 minutes prior to scheduled classes/sessions and generally departed

within 30 minutes after the end of the scheduled classes/sessions. This general pattern was used to identify the potential arrival/departure overlap for concurrently or sequentially scheduled classes/sessions at the Project Site.

- Staff at each facility also noted that children's classes often were attended by multiple family members or friend groups arriving in the same vehicle, and some staff also carpooled. Therefore, the number of vehicle arrivals was lower than the number of participants and staff. Based on discussion of this characteristic with City staff, an Average Vehicle Ridership (AVR) of 1.2 was selected as an appropriate adjustment factor to account for the potential of multiple persons arriving as part of a single party or carpooling. With application of this AVR factor, each person-trip to or from the Project Site would equate to 0.83 vehicle trips on average.

## **TRIP GENERATION RATE DEVELOPMENT**

Typical peak season weekday and Saturday activity levels were developed based on review of the programming and staffing schedules at each facility. Class attendance limits were used to identify typical participant levels throughout the day. The typical participant arrival and departure patterns described above (i.e., arrival 30 minutes prior to a session and departure within 30 minutes following a session) were applied to the programming schedule to estimate person-trips to and from an aquatic facility on a daily basis and during the specific analyzed peak hours. Finally, the number of person-trips was converted to vehicle trips by applying the 1.2 AVR adjustment factor. The results of this process are summarized below and in Table C-1 for each of the four facilities.

### **Individual Site Trip Generation Findings**

Trip generation rates were developed for each facility on weekdays and Saturdays and during the analyzed peak hours (i.e., weekday morning and afternoon peak hours and Saturday midday peak hour) using the process described above. The rates are based on each facility's total daily participant capacity in accordance with their programming schedules. The following summarizes the findings of each site.

### Community Services Community Recreation Center – Temecula

The operating hours of this facility are generally Monday through Friday, 9:00 AM to 7:00 PM, and Saturday, 1:00 PM to 5:00 PM. The weekday programming reflects a combination of scheduled classes and open session during the day. Saturdays only offer open session, with no scheduled classes. Review of the class schedule indicated a total programmed capacity of 700 persons with 80 employees on a typical weekday and 220 persons with 11 employees on Saturday. The following trip generation characteristics were developed from review of the class and employee shift schedules:

- Weekday daily – 1.86 trips per person
- Weekday morning peak hour – 0.14 trips per person, 67% inbound & 33% outbound
- Weekday afternoon peak hour – 0.17 trips per person, 54% inbound & 46% outbound
- Saturday daily – 1.83 trips per person
- Saturday midday peak hour – 0.92 trips per person, 90% inbound & 10% outbound

### Westwind Community & Aquatic Center – Ontario

The operating hours of this facility are generally Monday through Friday, 9:30 AM to 7:30 PM, and Saturday, 12:00 PM to 3:00 PM. The weekday programming reflects a combination of scheduled classes and open session during the day. Saturdays only offer open session, with no scheduled classes. Review of the class schedule indicated a total programmed capacity of 336 persons with 17 employees on a typical weekday and 200 persons with four employees on Saturdays. The following trip generation characteristics were developed from review of the class and employee shift schedules:

- Weekday daily – 1.75 trips per person
- Weekday morning peak hour – 0.06 trips per person, 100% inbound
- Weekday afternoon peak hour – 0.13 trips per person, 43% inbound & 57% outbound
- Saturday daily – 1.70 trips per person
- Saturday midday peak hour – 0.83 trips per person, 50% inbound & 50% outbound

#### Rialto Fitness Center, Tom Sawyer Swimming Pool – Rialto

The operating hours of this facility are generally Monday through Friday, 8:00 AM to 7:30 PM, and Saturday, 9:00 AM to 4:30 PM. The weekday programming reflects a combination of scheduled classes and open session during the day. The Saturday programming reflects morning classes and midday to afternoon open sessions. Review of the class schedule indicated a total programmed capacity of 263 persons with 12 employees on a typical weekday and 115 persons with nine employees on Saturday. The following trip generation characteristics were developed from review of the class and employee shift schedules:

- Weekday daily – 1.74 trips per person
- Weekday morning peak hour – 0.14 trips per person , 58% inbound & 42% outbound
- Weekday afternoon peak hour – 0.28 trips per person, 21% inbound & 79% outbound
- Saturday daily – 1.77 trips per person
- Saturday midday peak hour – 0.43 trips per person, 50% inbound & 50% outbound

#### Santa Ana Community Services, Jerome Pool – Santa Ana

The operating hours of this facility are generally Monday through Friday, 7:30 AM to 8:00 PM, and Saturday, 1:00 PM to 3:30 PM. The weekday programming reflects a combination of scheduled classes and open session during the day. Saturdays only offer open session, with no scheduled classes. Review of the class schedule indicated a total programmed capacity of 452 persons with 16 employees on a typical weekday and 125 persons with four employees on Saturday. The following trip generation characteristics were developed from review of the class and employee shift schedules:

- Weekday daily – 1.75 trips per person
- Weekday morning peak hour – 0.10 trips per person, 47% inbound & 53% outbound
- Weekday afternoon peak hour – 0.37 trips per person, 61% inbound & 39% outbound
- Saturday daily – 1.73 trips per person
- Saturday midday peak hour – 0.86 trips per person, 100% inbound

### **Facility Average Trip Generation Rates**

Based on the trip generation findings described above, the trip rates represent a typical weekday and Saturday of operation for a municipal aquatic center during peak season conditions. Average trip rates were calculated and expressed as trips per person, based on the daily programming capacity:

- Weekday daily – 1.78 trips per person
- Weekday morning peak hour – 0.11 trips per person, 68% inbound & 32% outbound
- Weekday afternoon peak hour – 0.24 trips per person, 45% inbound & 55% outbound
- Saturday daily – 1.76 trips per person
- Saturday midday peak hour – 0.76 trips per person, 73% inbound & 27% outbound

The development of the trip generation at each of the studied facilities is detailed in Exhibit C-1.

### **PROJECT TRIP GENERATION ESTIMATES**

The proposed programming for the City Park Aquatic Center was developed by City staff and used to develop the Project trip generation estimate. The key characteristics included:

- The weekday programming included scheduled classes and open sessions offered throughout the day (generally comparable to the studied facilities).
- The weekday programming capacity was identified as 500 persons.
- The Saturday programming included a combination of scheduled classes and open sessions throughout the day. However, the midday period included scheduled classes where the studied facilities did not offer classes during that period.
- The Saturday programming capacity was identified as 562 persons.
- The off-peak season demand for programming was generally estimated by City staff, in conjunction with a review of the data from the four study locations, to be approximately 20% less than the peak season (or 80% of the peak season).

### **Applicability of Average Trip Rates**

Consistent with the four surveyed sites, the Project's proposed schedule includes a combination of open swim and scheduled programming on weekdays. Therefore, based on a review by City staff, the facility average weekday trip generation rates were considered applicable to the Project. Similarly, the facility average Saturday daily rate was considered applicable as the various facilities included open swim and some included some scheduled programming.

However, the Project's proposed schedule includes additional Saturday programming (as opposed to only open sessions), including through the midday peak period. None of the four facilities offered scheduled classes through the midday peak period. Therefore, in consultation with City staff, the facility average Saturday midday rate was determined not to be directly applicable to Project based on the Project's proposed midday Saturday class schedule. For the purposes of this analysis, therefore, an alternate trip generation rate was developed for the Saturday midday peak hour.

### **Alternative Saturday Midday Peak Hour Rate**

The alternate midday trip generation rate was developed using the same methodology described above based on the Project's proposed Saturday class schedule around the midday period. The class capacities along with the arrival/departure patterns and AVR described above were used to estimate the proportion of midday peak hour trips to Saturday daily trips. This proportion was used to calculate the midday peak hour trip rate as 0.24 trips per person with 50% inbound & 50% outbound. City staff reviewed this rate and determined it was applicable for estimating Project trip generation during the Saturday midday peak period.

### **Peak vs. Off-Peak Trip Rates**

The rates developed above are all based on peak season activity levels. To be more consistent with typical operating conditions as well as conditions when the traffic counts were collected (i.e., during the school year), City staff directed the development of off-peak season trip generation estimates for the Project. As noted above, the City identified the off-peak season activity levels

as being 20% lower than peak season. Therefore, this adjustment was applied to the peak season trip generation rates. The resulting off-peak season trip generation rates are:

- Weekday daily – 1.424 trips per person
- Weekday morning peak hour – 0.088 trips per person, 68% inbound & 32% outbound
- Weekday afternoon peak hour – 0.192 trips per person, 45% inbound & 55% outbound
- Saturday daily – 1.408 trips per person
- Saturday midday peak hour – 0.189 trips per person, 73% inbound & 27% outbound

### **Project Trip Generation Estimates**

Project trip generation estimates were calculated by applying the peak season and off-peak season trip generation rates described above to the weekday and Saturday facility capacities (500 and 562 persons, respectively). The resulting Project trip generation estimates are summarized below and detailed in Table C-2.

#### **Peak Season Operation**

- Weekday daily – 979 trips
- Weekday morning peak hour – 61 trips, 41 inbound & 20 outbound
- Weekday afternoon peak hour – 132 trips, 59 inbound & 73 outbound
- Saturday daily – 989 trips
- Saturday midday peak hour – 133 trips, 66 inbound & 67 outbound

#### **Off-Peak Season Operation**

- Weekday daily – 783 trips
- Weekday morning peak hour – 48 trips, 33 inbound & 15 outbound
- Weekday afternoon peak hour – 106 trips, 48 inbound & 58 outbound
- Saturday daily – 791 trips
- Saturday midday peak hour – 106 trips, 53 inbound & 53 outbound

**TABLE C-1  
TRIP GENERATION RATE DEVELOPMENT  
SELECTED AQUATIC FACILITIES**

| Facility Location                                                             | Trip Generation Rates of Selected Facilities [a] |              |            |             |              |            |             |             |                  |            |             |

**Notes:**

Trip generation rates developed from attendance/programming data provided by the noted facilities for the summer 2025 session (generally June-August). All rates represent peak/summer operating conditions.

[a] Trip generation rates calculated based on the facility's programmed capacity (persons) on weekdays and weekends.
