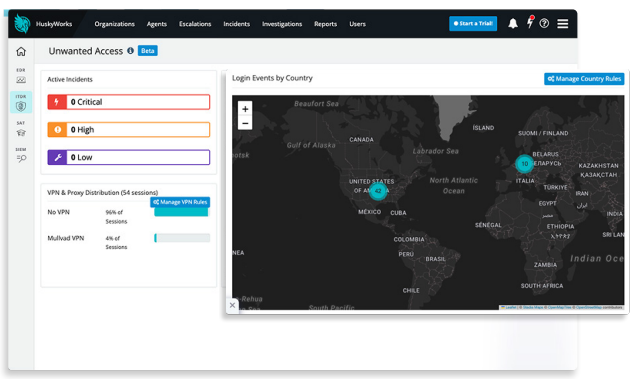
Huntress Managed Identity Threat Detection & Response (ITDR)

Huntress Managed ITDR finds and stops identity-based threats in Microsoft 365.

Identity is the new endpoint.

Huntress Managed ITDR is built to address the evolving threat landscape of credential theft, session hijacking, VPN and location-based anomalies, credential-stealing malware and Adversary-in-the-middle (AiTM) attacks. Our fully managed solution provides continuous monitoring for identity-based threats, rapid detection of unauthorized access, and swift response to suspicious activities like rogue applications and shadow workflows. By focusing on the protection of credentials and session tokens, Huntress ensures your organization's digital identities remain secure, even as attackers develop more sophisticated methods.



Key Outcomes

Always-on Identity Protection

Sleep easier knowing our team of relentless identity experts monitors your Microsoft 365 environment 24/7, identifying and mitigating threats.

Block Unwanted Access

Detection and response to combat credential theft, session hijacking, and AiTM attacks to protect your most critical assets.

Uncover Rogue Apps

Proactively detect and remediate potentially malicious OAuth applications installed in your Microsoft 365 environments.

Combat Shadow Workflows

Neutralize malicious inbox and forwarding rules to protect your business from pervasive business email compromise (BEC) attempts.

No Noise. Just Results.

Every alert we send is actionable, human-verified, and built to keep you two steps ahead of the attackers. Our low false positive rate puts us ahead of others in the industry.

HUNTRESS

98% of users say that Huntress Managed ITDR has helped them reduce the time it takes to detect and respond to identity threats.[1]

Threats Detected

Location-based and VPN Anomalies
Expose unusual login locations and VPNs to ensure only authorized users have access to your data.

Malicious Inbox & Forwarding Rules
Spot shady activity, protect your inbox, and keep your emails secure and private.

Session Hijacking
Stop hackers from exploiting your systems and bypassing your 2FA/MFA.

Credential Theft
Keep cybercriminals out by locking down and monitoring your identity assets.

Rogue Apps
Hunt and stop malicious OAuth apps lurking in your Microsoft 365 environment.

> Huntress flagged a suspicious login attempt, and I was able to immediately block the account before the bad actor could do any damage. I'm super pleased with how quickly we were able to remediate this. Before Huntress, it could have been days or even weeks before we knew an account was hacked, and likely only after malicious emails were sent out.
