

# How to prepare for technical due diligence?

You're trying to prove to investors that you have built something of value and have the right team in place to take it to the next level. This means showing them that your processes are sound, you have the right capabilities in the team and of course that what you've built is top quality.

---

## 01 - Process

*What to prepare for review:*

1. Solution stack
2. Architectural components
3. Hosting, integrations, data flows and QA processes
4. Feature development processes and backlog

---

## 02 - Capability

*What to prepare for review:*

1. Capability assessment
2. Team structure
3. Knowledge retention and documentation - resources and tools.

---

## 03 - Quality

*What to prepare for review:*

1. Source code
2. Product demos
3. Future product roadmap.
