

SafeTag Protect

Extra protection for your SafeTags.

The SafeTag Protect is a transparent protective layer that shields your SafeTag from scratches and friction. Ideal for areas where the sticker is exposed to wear, helping it stay visible and effective for longer.

How do you apply SafeTag Protect?

1> Apply your SafeTags

First, place the SafeTags on your bike in the desired locations. For this, follow the instructions included with your SafeTag.

English
Version

2> Let it adhere

Allow the SafeTags to bond to the surface of your bike for at least 48 hours. This ensures optimal adhesion.

3> Apply SafeTag Protect

Each sheet contains one large and one small transparent protective layer.

Make sure the **SafeTags are clean and dry.**

Hold the protective layer **above the SafeTag** first to check if it fits properly.

Then apply the large sticker to the large SafeTag and the small sticker to the small SafeTag.

Press firmly and smooth out any air bubbles.

Note: once applied, do not remove. Let it bond properly for the best result.
