SERVICE BRIEF

Cybersecurity Connector Development & Integration Engineering Services

SIEM, SOAR, TIP, and ASM integrations. Build cybersecurity integrations in weeks, not months.

350+
connectors delivered across SIEM, SOAR, TIP, EDR, and cloud security

Up to 50%
faster delivery with enterprise-grade quality

Up to 60%
lower development costs without cutting testing

10+ yrs
of connector and integration engineering

ABOUT THE SERVICE

What we deliver

Connector development is the engineering of custom integrations, called security connectors, that link systems such as TIPs, SIEMs, EDR tools, and vulnerability management platforms. Our connectors support bidirectional, real-time data exchange through APIs, message queues, or streaming, and normalize formats like JSON, Syslog, and STIX/TAXII into a unified schema. AI-assisted engineering moves delivery from months to weeks while keeping quality, testing, and maintainability intact.

Microsoft Sentinel expertise

We build, deploy, and optimize Sentinel data connectors using the Codeless Connector Framework (CCF), for real-world integrations that perform at scale.

SERVICE AREAS

Where we build

SERVICE AREA	WHAT IT DELIVERS
Threat intelligence	Integrate external threat feeds into SIEM, SOAR, TIP, ticketing, and network and cloud tools for richer context and better prioritization.
Workflow automation	Playbooks for SIEM, SOAR, and TIP users that automate routine tasks and connect your security ecosystem.
Custom detection rules	Tailored SIEM rules built through threat modeling, log source identification, pattern analysis, rule development, and continuous optimization.
Dashboard development	Custom dashboards that consolidate alerts, incidents, and threat intelligence for real-time visibility.
Log data ingestion	Connectors that bring Syslog, JSON, CEF, CLF, ELF, and CSV logs into SIEMs, with parsing, testing, and documentation.
Content packs and products	Cloud SIEM content, log parsing and mappings, and security product integrations with dashboards.
Cryptocurrency intelligence	AML and KYT integrations for exchanges, covering address ownership, risk ratings, and flagging or blocking transactions.

BUILT FOR REAL-WORLD SECURITY WORKFLOWS

Connectors That Make Your Security Product Work Across the Ecosystem

Help customers get more value from your product by connecting intelligence, telemetry, and workflows to the tools they use every day.

SERVICE OFFERINGS

How you can work with us

Custom development
New connectors over APIs, webhooks, and event streams.

Enhancement
Optimization of your existing connectors.

Certification
Hardening and certification for marketplaces.

Ongoing support
API upgrades, platform updates, fixes, and tuning.

WHO IT IS FOR

Built for teams that ship integrations

Threat feed providers
Reach more users by integrating feeds into Splunk, XSOAR, Microsoft Sentinel, and IBM QRadar.

Security vendors
Add off-the-shelf integrations to SIEM, SOAR, TIP, ASM, EDR, VM, ticketing, and networking products.

Enterprises
Get tailored integrations that improve visibility across the tools you already run.

Crypto AML companies
Deliver AML and KYT intelligence directly inside partner platforms.

THE PROCESS

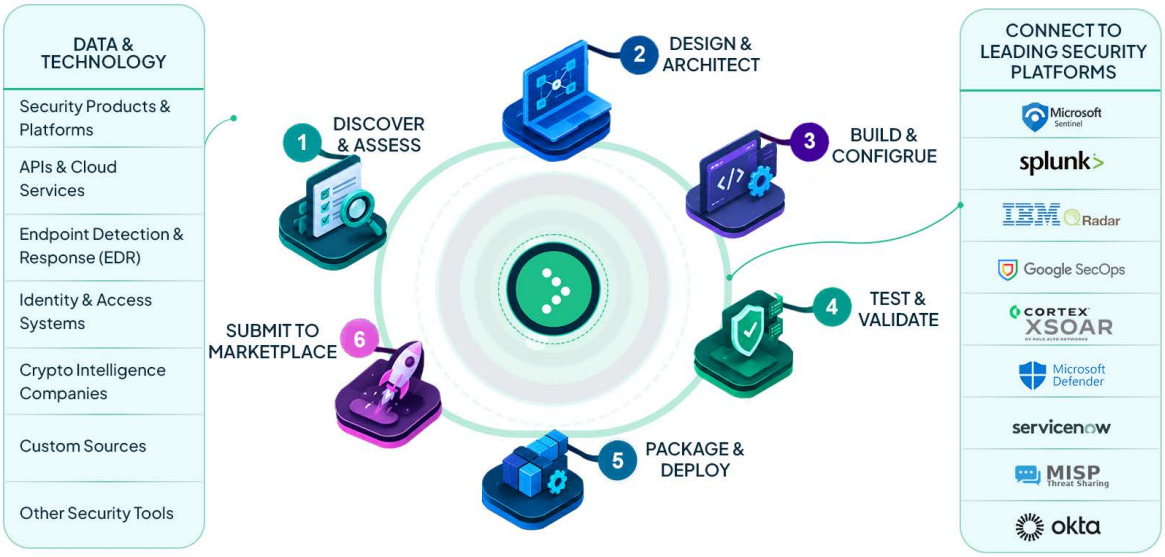

Connector development lifecycle

Six stages take a connector from first use case to marketplace listing, with testing and documentation built in.

CONNECT – INTEGRATE – PROTECT

Expert Cybersecurity Connector Development & Integration Engineering Services

CONNECTOR DEVELOPMENT LIFECYCLE

SECURE CONNECTORS. REAL IMPACT

- Enterprise-Grade Security
- High Performance & Reliability
- Scalable for any Use Case
- Future-Ready Integrations

OUTCOMES & BUSINESS IMPACT

- Stronger Security Posture
- Faster Detection & Response
- Operational Effeciency
- New Capabilities & Integrations
- Lower Costs & Faster Time-to-Market

THE INTEGRATION LIFECYCLE

We Build, Test, and Maintain Connectors for the Long Run

Successful connector development and threat intelligence integrations need disciplined testing, release preparation, and ongoing care.

1. Discover

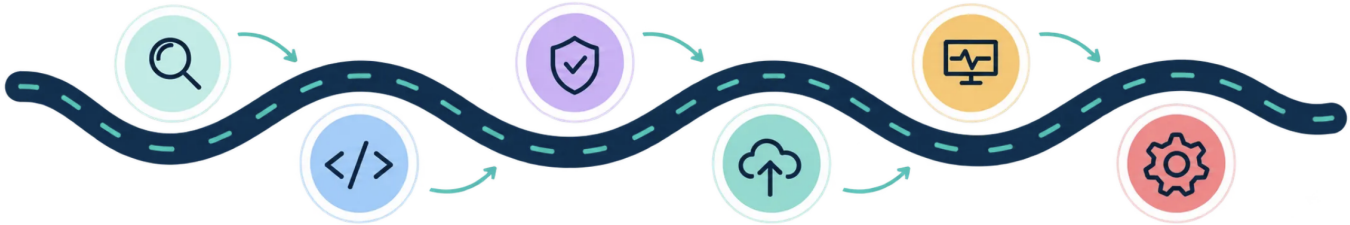

Understand product, API, use cases, and platform.

3. Test

Validate behavior, data handling, resilience, and security needs.

5. Monitor

Run agreed health and compatibility checks.

2. Build

Develop the integration and agreed functionality.

4. Launch

Prepare documentation and submission support.

6. Maintain

Address API changes, defects, upgrades, and enhancements.

PLATFORM EXPERIENCE

Projects delivered by platform

15+ projects delivered on each platform below, spanning SIEM, threat intelligence, ticketing, and endpoint integrations.

15+ splunk> a CISCO company SIEM & security analytics connectors	**15+** paloalto NETWORKS SIEM & security analytics connectors	**15+** Microsoft Sentinel SIEM & cloud security connectors
15+ ThreatConnect. Threat intelligence integrations	**15+** IBM QRadar SIEM integrations	**15+** MALTEGO Investigation and intelligence integrations
15+ MISP Threat Sharing Threat intelligence integrations	**15+** servicenow Security workflows and ticketing	**15+** Microsoft Defender Endpoint and security integrations

CONNECTOR COVERAGE

Connector types and example platforms

CONNECTOR TYPE	EXAMPLE PLATFORMS
SIEM	Microsoft Sentinel, Splunk, IBM QRadar, Exabeam
SOAR	ThreatConnect, Splunk, Palo Alto Networks, Cortex XSOAR, Swimlane
TIP	MISP, Anomali, OpenCTI, Maltego, FireEye, ServiceNow
EDR and XDR	CrowdStrike, SentinelOne, Defender for Endpoint
Cloud security	AWS, Azure, GCP, Wiz
IAM	Okta, Azure AD, Ping Identity
Vulnerability management	Qualys, Rapid7, Tenable
ITSM and ticketing	ServiceNow, Jira Service Management
ASM	IONIX, Cortex Xpanse

WHY LOGINSOFT

Proven expertise, faster partner onboarding

Key benefits

- **Multifaceted team.** Skilled engineers for complex integrations.
- **Platform agnostic.** SIEM, SOAR, TIP, ticketing, and log management.
- **Tailored solutions.** Custom integrations, not one-size-fits-all.
- **Future ready.** Designed to adapt and scale.

Partnership benefits

- **Engineering collaboration.** Direct partner contact for faster issue resolution.
- **Dedicated environments.** Dev and test environments for validation.
- **Expedited integration.** Familiar with onboarding, marketplace submission, and documentation.
- **Priority validation.** Priority app validation from platform teams.

At Loginsoft, we have delivered 350+ connectors across SIEM, SOAR, TIP, EDR, and cloud security, backed by 10+ years of experience and pipelines that handle millions of events per day.
