

## WAREHOUSE MANAGEMENT SOLUTION

# Smart Warehouse Execution Built for Food Distribution

BFC WMS connects inbound scheduling, receiving, inventory, selection, pallet building, loading, and proof of delivery in one food-specific warehouse management system — so every team works from the same real-time operational picture.

## KEY CAPABILITIES

## The Warehouse System Built for Food

Generic systems weren't built for food. BFC WMS brings inbound and outbound together in one purpose-built solution.

- ✓ Improve inventory accuracy with real-time visibility from receiving through delivery
- ✓ Reduce mispicks, shorts, credits and rework with food-specific workflows
- ✓ Increase throughput across dock scheduling, putaway, selection and loading
- ✓ Built-in FSMA 204 lot-level traceability, not bolted on after the fact

## INBOUND

**Dock**

Automated communication between vendors, carriers and transportation, with real-time alerts from scheduling through arrival and unloading.

## INBOUND

**Replenishment & Inventory**

Capture item numbers, lot numbers, weights and expiration dates at receiving, then automate directed putaway, replenishment triggers and cycle counts.

## OUTBOUND

**TruckBuilder®**

Builds pick paths around how the truck should be loaded — stop sequencing, temperature zones and stacking rules built in, right the first time.

## OUTBOUND

**Select**

Fully mobile selection with scan verification and optimized, catch-weight-flexible pick paths across every temperature zone.

## OUTBOUND

**Deliver**

Drivers scan off the truck at every stop, capturing signatures, photos and returns in real time, with live route visibility for supervisors.

# How BFC WMS Works

From inbound dock to outbound delivery, one connected process — built for food distribution.

## INBOUND Dock & Receiving

- Automated dock scheduling with real-time vendor and carrier alerts, from scheduling through arrival and unloading
- Capture item numbers, lot numbers, catchweights, and expiration dates at receiving
- Automated putaway with replenishment triggers keep every pick slot stocked and accurate

## OUTBOUND TruckBuilder & Select

- TruckBuilder builds the truck and every pallet to the route, with stop order, temperature zones, and stacking rules built in.
- Fully mobile selection with scan verification and catch-weight-flexible pick paths
- Every exception captured at the point of pick, before it reaches the customer

## OUTBOUND Deliver

- Drivers scan off the truck at every stop, capturing signatures, photos, and notes in real time
- Live dashboards give supervisors full route visibility and exception tracking
- Returns captured at the point of delivery feed straight back into inventory

## BFC ANALYTICS

# One Click to Profitability

Labor productivity, warehouse health, and customer service are the three areas that determine whether your operation is profitable. BFC Analytics gives your managers instant visibility into all three, benchmarked against real food distribution facilities.

### Labor Productivity

Productivity by zone, shift, and individual — see who needs coaching and where re-slotting moves the average.

### Warehouse Health

Scan percentage, mispicks per 1,000 picks, and exception patterns, drilled to root cause in seconds.

### Customer Service

Fill rate, shorts, returns, and on-time performance by customer, increasing customer satisfaction.

### Benchmark Comparison

See your KPIs against nearly 100 real food distribution facilities, not industry surveys.

# 30%

**Increase in Pieces Per Hour**  
Average productivity gain after go-live

# 65%

**Increase in Scan Percentage**  
Fewer missed scans, fewer mispicks

# ~100

**Food Distributors Benchmarked**  
Real transactional data, not survey responses

Trusted By the Industry's Top Food Distributors
