

THE FITTEST YOU

Name:

Test Period:

YOUR METABOLISM. MEASURED.

Daily Caloric Burn

Calories Eaten

2748 cal/day

Trendline of +0.7 lbs
per week indicates
surplus of 332 calories
per day

Calorie Intake by Objective

Currently eating
2748 cal/day

1812	2175	2416	2658	2659+
Max Safe Fat Loss (-1.2 lbs/week)	Burn Fat, Build Muscle (-0.5 lbs/week)	Maintenance	Build Muscle (+0.5 lbs/week)	Gain Weight (> +0.6 lbs/week)

Energy Budget

Basal Metabolic Rate: 1564 cal/day	Activity: 852 cal/day
---------------------------------------	--------------------------

Physical Activity Level

1.54					
Sedentary	Lightly Active	Moderately Active	Highly Active	Athlete	Overreaching (>2.5)

THE FITTEST YOU

Complete Energy Budget

BMR: Basal Metabolic Rate

Calories burned at complete rest.

TEF: Thermic Effect of Food

Calories burned while digesting food.

EXERCISE

Calories burned during your logged workouts.

NEAT: Non-Exercise Activity Thermogenesis

Calories burned by non-exercise activity (e.g. work and daily life).

Energy Availability - (non-exercise calories eaten per kilogram of lean body mass)

You may have limited energy to fuel all of your non-exercise physiological functions.

Training Sustainability - Currently at 32% of sustainable limit

You're training sustainably and are currently 1495 calories per day below your upper limit for sustainable energy expenditure.

THE FITTEST YOU

Body Composition - Weight: 191.2 lbs

Body Fat Percentage - Lower than 86% of peers

Hydration - Water Throughput: 5.1 Liters/day

How do you compare to the scientific literature?
