**Cyber security culture measurement and change**

Our people are our greatest cyber security asset but nearly 70% of all breaches involve a human element. We continue to struggle to understand & measure the root causes behind why people behave in the ways they do. Our behavioural scientists & psychologists have designed the Temperature platform to measure and improve your cyber security culture. It is research evidence-based, data-driven & people-centric.

Use Temperature to:

- identify the root causes of human error linked to four critical factors that make-up security culture – Leadership, Policy, Knowledge and Social Environment,
- deliver & benchmark your cyber security culture scores across your organisation,
- reduce your human cyber risks by identifying & mitigating key areas of cyber security culture risk,

## Our people are our greatest cyber security asset

But nearly **70% of all breaches involve a human element.**

We continue to struggle to understand & measure the root causes behind why people behave in the ways they do. Our behavioural scientists & psychologists have designed the Temperature platform to measure and improve your cyber security culture.

## Use Temperature to:

An all-in-one organisational culture change platform that transforms your human risk management programme

### Identify Root Causes

Discover the root causes of human error linked to four critical factors: Leadership, Policy, Knowledge and Social Environment.

### Benchmark Culture Scores

Deliver & benchmark your cyber security culture scores across your entire organisation with data-driven insights.

### Reduce Human Cyber Risks

Identify & mitigate key areas of cyber security culture risk to protect your organisation from threats.

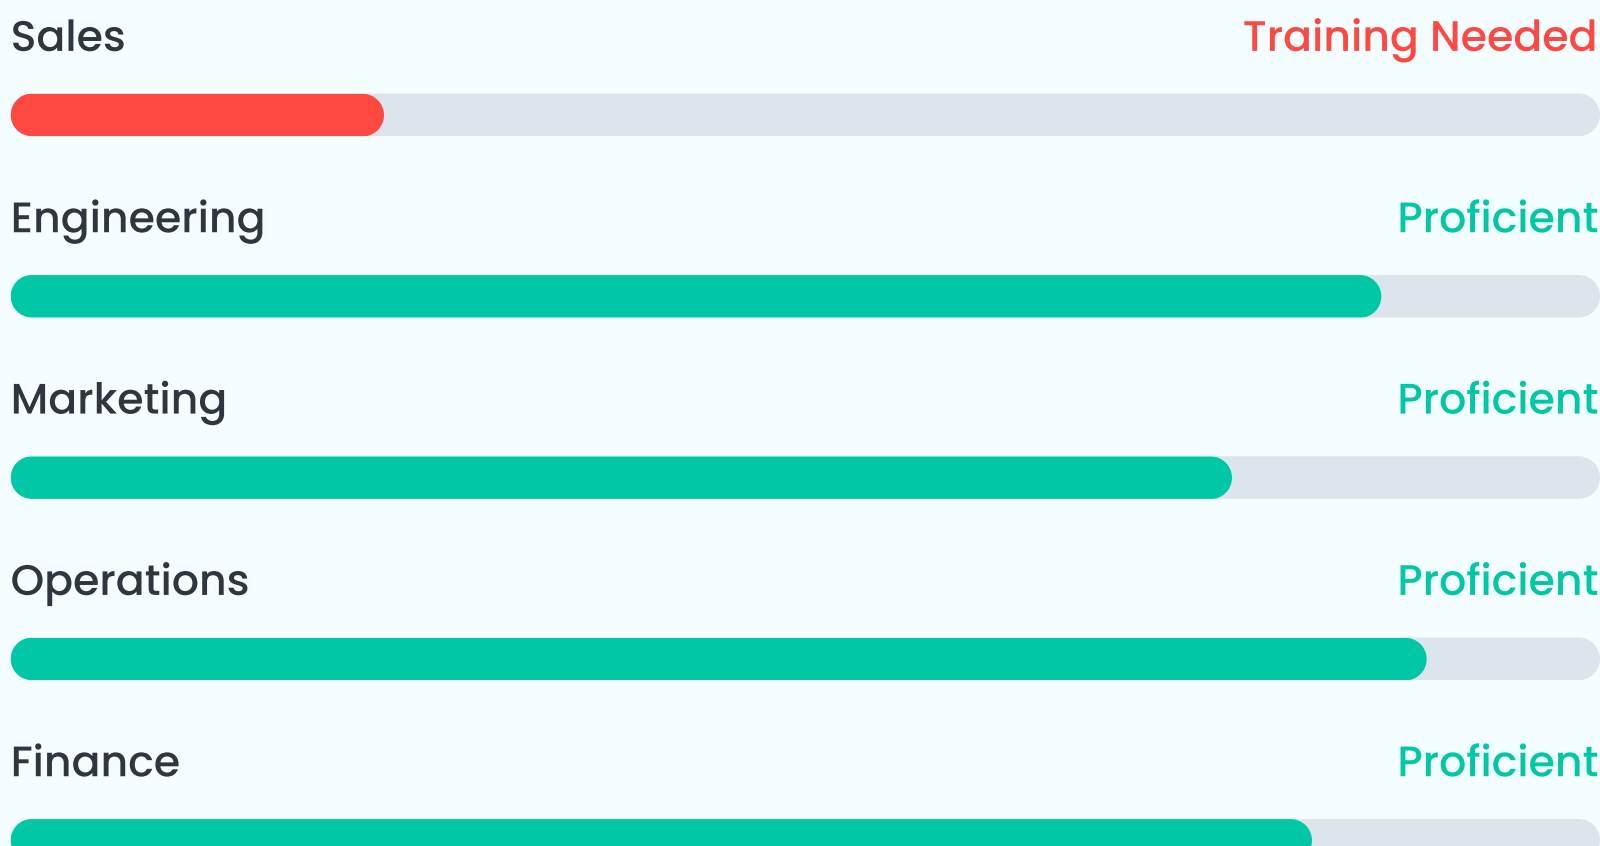

### Develop Positive Culture

Build a positive security culture based on trust, collaboration & innovation across all teams.

## Train Smarter, Not Harder

Stop wasting resources on blanket training. Temperature pinpoints exactly who needs training, what they need to learn, and where the real gaps exist.

### Knowledge Gap Analysis (example)

Example: Temperature reveals the sales team needs focused training while others are already competent.

### Targeted Training

Focus resources only where they're needed. No more training employees who already have the competence.

### Reduce Time & Cost

Significantly cut unnecessary training hours and associated costs by addressing only actual gaps.

### Real Organisational Insight

Gain data-driven visibility into what your organisation actually knows – and where the real vulnerabilities lie.

## Why Offer Temperature to Your Clients?

Expand your portfolio with a cutting-edge solution that addresses the human element in cyber security

### Speed Up Time to Market

Launch cyber security culture services quickly under your brand with our white-label solution. No development time required.

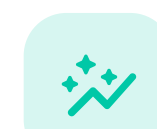

### Evidence-Based Approach

Deliver scientifically validated solutions designed by behavioural scientists and psychologists.

### Easy to Onboard

Simple implementation for any organisation. Your clients will be up and running in no time.

### Differentiate Your Offering

Stand out in the market with a comprehensive human risk management platform that addresses the #1 security challenge.

## Real-World Ways MSPs Use Temperature

Deliver measurable value to your clients across different industries and use cases

### Enterprise Organizations

Help large enterprises understand their security culture across multiple departments and locations, identifying weak points before they become breaches.

Reduce incidents by up to 60%

### Growing SMBs

Enable smaller businesses to establish strong security foundations as they scale, building the right culture from day one.

Faster security maturity

### Compliance-Driven Industries

Support organisations in regulated sectors to demonstrate measurable security culture improvements for audits and certifications.

Audit-ready reporting
