HASTUS
Installations

Treelight is a trusted GIRO partner
for carrying out HASTUS installations.

A successful HASTUS implementation depends on more than just software — it requires the right ICT infrastructure and a carefully managed installation process to ensure long-term performance and system stability. At Treelight, we combine in-depth knowledge of both the HASTUS environment and enterprise IT architecture to deliver installations that are smooth, reliable, and future-ready.

We provide:

- End-to-end installation without requiring internal expertise
- Short lead times and predictable timelines
- Minimal disruption to your daily operations

SPECIFICATIONS & PLANNING: A SOLID FOUNDATION

Every successful HASTUS project begins with a solid specification phase. Treelight documents every technical and procedural detail of your implementation to ensure accuracy, clarity, and optimal project delivery. This results in a high-level and low-level design.

INITIAL INSTALLATION: LAYING THE GROUNDWORK

For first-time installations, GIRO prepares a **Technical Architecture Document (TAD)** — a detailed blueprint outlining the infrastructure requirements. The input for this document is the Low-level design. GIRO performs the base installation and Treelight plays a crucial role in making this successful:

- Advising on hardware and platform choices for performance and stability
- Supporting the creation of HLD/LLD documentation
- Supplying key technical input for the TAD (e.g., number of users, interfaces, architecture, security)
- Monitoring and guiding the installation process
- Verifying that everything is delivered as specified
- Planning and coordinating any required follow-up actions

SUBSEQUENT RELEASES: MANAGED BY TREELIGHT

All follow-up installations can be fully managed by Treelight. These follow a clear, proven protocol, ensuring quality while reducing installation downtime.

HASTUS CHANGE MANAGEMENT

Changes to HASTUS can originate from new GIRO releases or from evolving local requirements. In both cases, Treelight ensures that every change is implemented without disruption. Our change management services include:

- Strategic advice on upcoming changes and their potential impact
- Technical assessment of infrastructure effects (e.g., firewall changes, server deployments)
- Communication with GIRO on required updates
- Change tracking and impact monitoring
- Implementation of updates in your environment
- Deployment of modified installation packages, if necessary

ROLES & COLLABORATION

Treelight can manage the full installation lifecycle without requiring internal expertise. If your organization has in-house resources, we work as a complementary partner to support your team. In either case, you gain reliable, expert support that reduces risk, minimizes downtime, and shortens project timelines — saving time and money.

MINIMAL IMPACT ON DAILY OPERATIONS

We understand the importance of continuity. That's why Treelight can schedule installations outside of business hours in coordination with your support teams.
