## Smart Construction Rover: Features

### High-Precision, Cost-Effective

It specializes in basic functions- achieving overwhelming low price level. Site localization can easily be done.

### Can import LandXML data

By importing LandXML data, differences to design height can be grasped in real time.

### Receive GNSS correction information

The GNSS rover device can be used not only as a mobile station but also as a GNSS base station (fixed station).

Digital Radio Specifications

Smart Construction Ntrip Caster Server Specifications

# Smart Construction Rover Benefits

Retrieval of site coordinate to generate localization data can be done easily.

## Integration with Smart Construction suite

### Smart Construction Quick3D

Utilize coordinate data

### Smart Construction 3D Machine Guidance

Utilize localization data

### Smart Construction Dashboard

Utilize localization data

### Smart Construction Rover

IP65 Dustproof and Waterproof

Battery powered

Able to be used as base station

Cost Efficient

Competitive price to be utilized in each site

### Link measured coordinate data

You can easily associate coordinates with point cloud data captured with Smart Construction Quick3D.

### Link localization data

You can quickly and easily register your localization data to Smart Construction Retrofit.

### 3D view of measurement data

By reflecting the acquired localization data in Smart Construction Dashboard, it is possible to grasp the location of the site on the map.

Terms of Use	Device	Registration	Contract	Data	Others
