# MirrorTab

MirrorTab for Fraud Prevention
in the Age of AI

Stop Fraud Where It Happens:
Inside Customer Web Sessions

⚠ **Unprotected** Web Session Flow

Fraudsters are using AI and automation for new account fraud and to target unprotected customer web sessions, bypassing MFA, replaying session tokens, and behaving like real users to evade traditional fraud detection.
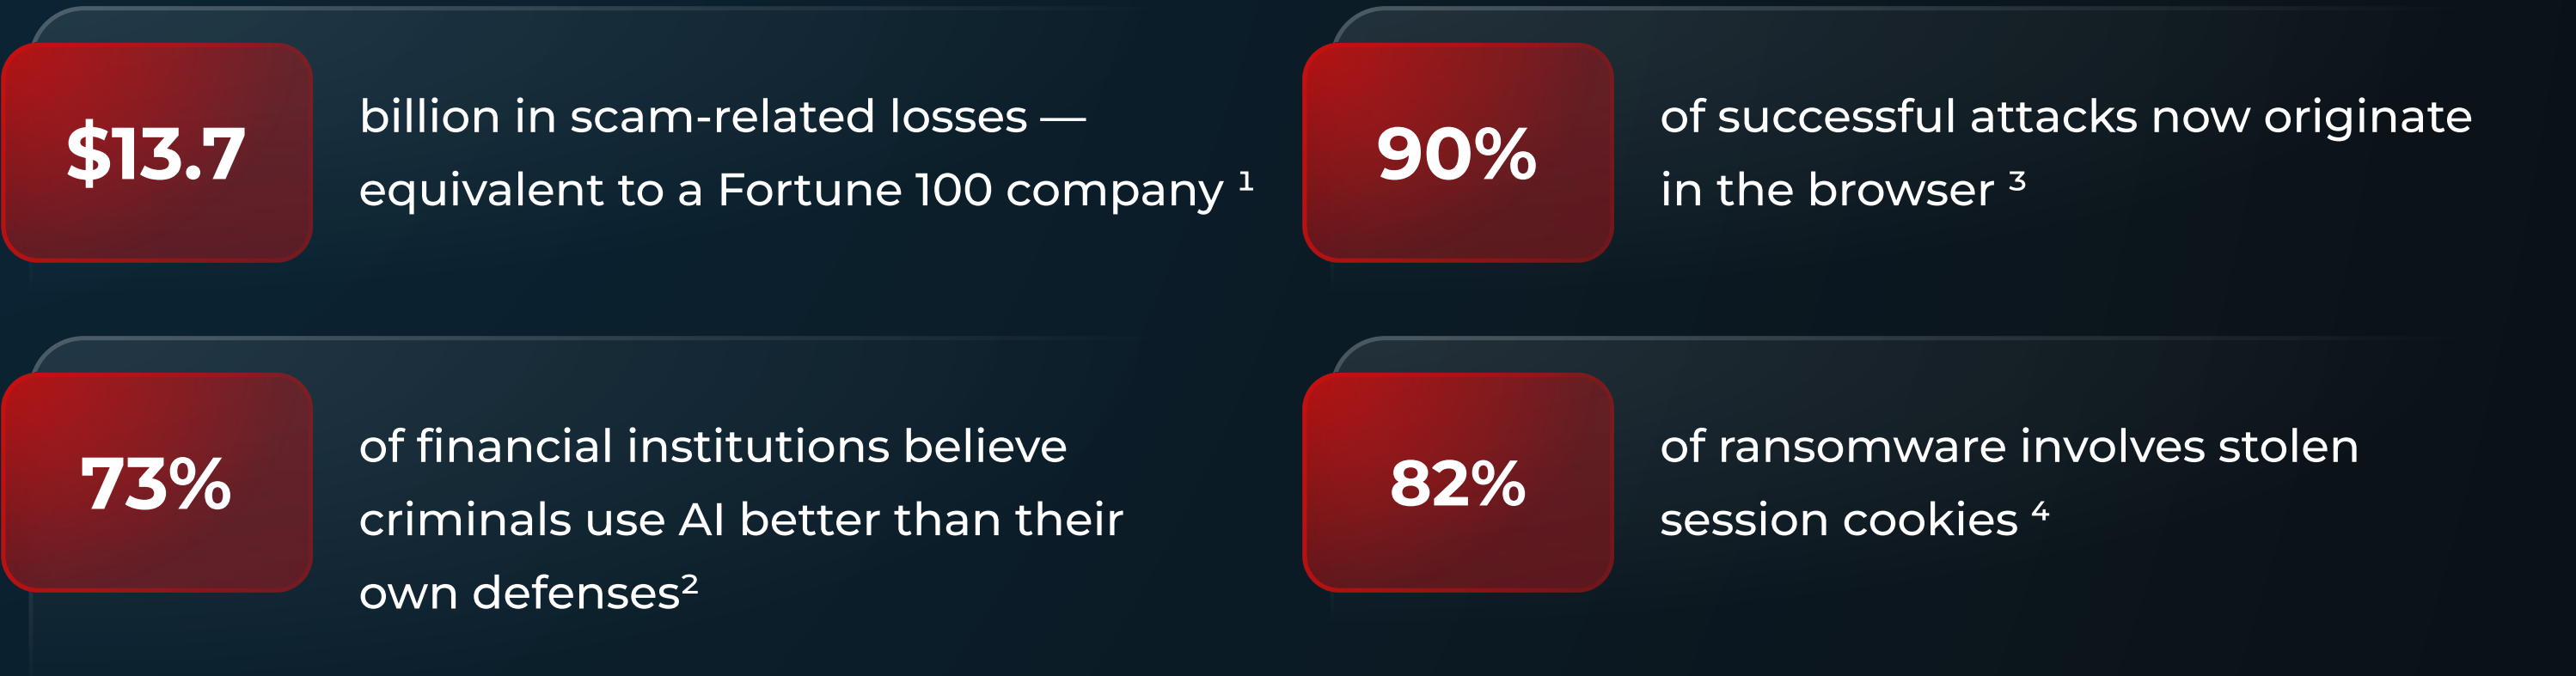

Login → Account Selection → Account Access → Payee Setup → Transfer Funds ☠

Data Scraping 👁   💉 Code Injection   🖥 API Manipulation

🔒 **Protected** Web Session Flow

Login → Account Selection → Account Access → Payee Setup → **Transfer Funds**

MirrorTab removes the browser attack surface fraudsters rely on, adding prevention to your fraud stack and protecting customer web sessions from AI bots, and automated attacks.

MirrorTab: The New Standard In Fraud Prevention

Backed by   GV   Altman Capital LLC   VALLEY CAPITAL PARTNERS

Fraud Has Moved Into Customer Web Sessions

Fraudsters aren't just mimicking user behavior with stolen credentials anymore.

They're hijacking active customer web sessions, manipulating transactions, scraping sensitive data, and triggering password resets to take over accounts.

$13.7 billion in scam-related losses — equivalent to a Fortune 100 company [1]

90% of successful attacks now originate in the browser [3]

73% of financial institutions believe criminals use AI better than their own defenses[2]

82% of ransomware involves stolen session cookies [4]

MirrorTab Stops Web Session Fraud

MirrorTab creates a secure web session that can't be tampered with, with no page code to exploit, no session tokens to steal, and no browser attack surface for fraudsters to manipulate.
