II	1689	9ft 6in	10.99	Lakes, Bays, and Sounds

### \*Conditions Of Carriage\*

Only those cargoes named in the vessel's Cargo Authority Attachment (CAA), Serial# C1-1800956 dated March 15, 2018, may be carried, and then only in the tanks indicated. When the vessel is carrying cargoes containing greater than 0.5% benzene, the person in charge is responsible for ensuring the provisions of 46 CFR part 197, Subpart C are applied.

Per 46 CFR 150.130, the Person in Charge of the vessel is responsible for ensuring that the compatibility requirements of 46 CFR 150 are met. Cargoes must be checked for compatibility using the figures, tables, and appendices of 46 CFR 150 in conjunction with the compatibility group numbers from the "Compat Group No" column listed in the vessel's CAA.

The maximum design density of cargo which may be filled to the tank top is 9.16 lbs/gal. Cargoes with higher densities, up to 13.33 lbs/gal, may be carried as slack loads, but shall not exceed the tank weight limits as listed above.

Per 46 CFR 151.10-15(c) the max tank weights reflect uniform (within 5%) loading at the deepest draft allowed. When carrying Subchapter O cargoes at shallower drafts, the barge(s) should always be loaded uniformly.

Certification Date: 15 Feb 2019 Expiration Date: 15 Feb 2024

## Certificate of Inspection

Vessel Name: CBC 1408

In accordance with 46 CFR part 39.1017 and 39.5001(e) this vessel's VCS has been evaluated and approved for multi-breasted tandem loading with this vessel.

\*Vapor Control Authorization\*

In accordance with 46 CFR Part 39, excluding part 39.4000, this vessel's vapor collection system has been inspected to the plans approved by MSC Letter C1-1800528 dated February 13, 2018, and has been found acceptable for the collection of bulk liquid cargo vapors annotated with "Yes" in the CAA's VCS column of the vessel's CAA.

The VCS system has been approved with a pressure side of 1.5 psig and vacuum side of 2 psig P/V valve with Coast Guard Approval 162.017/144/3.

The cargo tank top is suitable for a maximum allowable working pressure (MAWP) of 3.5 psig.

#### Explanation of terms & symbols used in the Table:

Cargo Identification

Note 1

Grade

Hull Type

NA

The propper shipping name as listed in 46 CFR Table 30.25-1, 46 CFR Table 151 05, and 46 CFR Part 153 Table 2 Chem Code The threa letter designation assigned to the cargo in the Chemical Hazards Response Information System (CHRIS) Manual Contain mixtures of cargoos may not have a CHRIS Code assigned

The cargo reactive group number assigned for compatibility determinations in 46 CFR Part 190 Tables I and II. In accordance with 46 CFR 150.130, the Person-in-Charge of the barge is responsible for ensuring that the compatibility requirements of 46 CFR Part 150 are met. Cargoes must be checked for compatibility using the figures, tables, and appendices of 46 CFR 150 in conjunction with the assigned reactive group number.

Bucause of the very high reactivity or unusual conditions of carrage or potential compatibility problems, his product is not assigned to a specific group in the Compatibility Chart. For additional compatibility Information, contact Commandant (CG-3PSO-3), U.S. Coast Guard, 2100 Second. Street, SW, Washington, DG, 20593-0001. Telephone 12021-372-1405. Compalabilily Group No

Note 2

(202) 372-1425 See Appendix I to 46 CFR Part 150 - exceptions to the compatability chart

Subchapter The subchapter in Title 46 Code of Federal Regulations under which the cargo has been classified Those flammable and combustible liquids listed in 46 CFR Table 30 25-1 Subchapter D Subchapter O

Those hazardous cargoes listed in 46 CFR Table 151 05 and 46 CFR Part 153 Table 2
Those cargoes listed in 46 CFR Part 153 Table 2 are non-regulated cargoes when carried in bulk on non-oceangoing barges Note 3

The cargo classification assignment based upon literature sources which were not verified by manufacturers data. The Poston-in-Charge shall verify the cargo grade based on Manufacturers data and ensure that the barge is authorized for carriage of that grade of cargo.

A, B C ammable liquid cargoes, as defined in 46 CFR 30-10 22 D. E Note 4

Combustible liquid cargoes, as defined in 46 CFR 30-10-15

The flammability combustibility grade of these cargoes may vary itemending upon the flashpoint and Reid vapor pressure. The Person-in-Charge shall verify the cargo grade based on Manufacturers data and onsure that the barge is authorized for starting of that grade of cargo.

Those subchapter O cargoes which are not classified as a tammable or combustible figuid.

NA No flammability/combustibility grade has been assigned yet, as the necessary flash point/vapor pressure data for such assignments are presently not available

The required barge hull classification for carriage of the expectition Subchapter O hazardous matural cargo, see 46 CFR 151.10-1

Designed to carry products which require the maximum preventive measures to preclude the uncontrolled release of cargo. See 46 CFR 151.10-1

Designed to carry products which require significant proventive measures to preclude the uncontrolled release of cargo. See 46 CFR 151.10-1(b)(3)

Designed to carry products of sufficient nazard to require a moderate degree of control. Sun 45 CFR 151 10-1(b)(4)

Not applicable to barges certificated under Subchapter D

Conditions of Carriage

Tank Group The vessel's tank group (as defined in Section 4) which is authorized for carriage of the named cargo Vanor Recover

Approved (Y or N) Yes: The vessel's VCS has been reviewed and approved by the MSC to control vapors of the specified cargo No: The vessel's VCS has been reviewed and is not approved by the MSC to control vapors of the specified cargo

Conditions of Carriage

Tank Group The vessel's lank group (as defined under the "46 CFR Tank Group Characteristics" listed on page 1) which is authorized for carriage of the named cargo

Vapor Recover Approved (Y or N) Yes: The vessel's VCS has been reviewed and approved by the MSC to control vapors of the specified cargo

No: The vessel's VCS has been reviewed and is not approved by the MSC to control vapors of the specified learge

VCS Category The specified cargo's provisional classification for vapor control systems Category 1

(No additional VCS requirements above those for banzene, gasolines and crude oil) All requirements applying to the handling of oil and hazardous materials in Titles 33 and 46 Code of Federal Regulations (GFR) apply to these targets. These specifically dealing with vapor control systems are in 33 CFR 155 750, 33 CFR 156.120, 33 CFR 156.170, 46 CFR 35 35 and 46 CFR 39 The cargo tank venting system calculations (46 CFR 39 20-11) and the pressure drop calculations (46 CFR 39 30-1(b))

must use appropriate friction factors, vapor densities and vapor growth rates.

(Polymerizes) Polymerization and residue build-up of these cargoes can adversely affect the vessel by fouling safety components and restricting vapor flow which round lead to cargo tank overpressure/ation. The vessel's owner-must develop a method of ensuring all VCS safety components are functional and polymer build-up is not causing an image condition due to increased pressure in the vapor control plains and cargo tanks. The method shall be acceptable to the local Officer in Charge, Marine Inspection. This is in addition to the requirements of Category 1. Please note that a material not normally considered a monorrour can be a problem in detenation arrester. Category 2

(Highly toxic) VCSs for these toxic cargoes cannot use a spill valve or rupture disk as the primary means to meet the overfill protection requirement of 46 CFR 39 20-9 This requirement is in addition to the requirements of Category 1 Category 3

Calegory 4 (Polymerizes and highly toxic) Must comply with requirements of Categories 1, 2 and 3

(High vapor pressure) VCS pressure drop calculations for cargoes with a vapor pressure greater than 14.7 psia at 115 F must take into account increased vapor-air Category 5

mixture densities and vapor growth rates as compared to Category 1 cargoes. Consult the Marine Safety Center's VCS Guidelines for further information. This

remitment is in addition to the requirements of Calegory 1

Calegory 6 (High vapor pressure and highly toxic) Must comply with requirements of Categories 1, 3 and 5 Category 7 (High vapor pressure and polymerizes) Must comply with requirements of Categories 1, 2 and 5.

попе The cargo has not been evaluated/classified for use in vapor control systems
