Dear Mr. Kumaria:

We reviewed reference s (a) through (c), submitted electronically by your email dated May 1, 2012 under the provisions of reference (d) References (a) through (c) received partial review by Marine Safety Center for compliance with 46 CFR Subchapter D. Accordingly, references (a) and (b) are **"Approved in accordance with NVIC 10-92, Ch-2"** Reference (c) was **"Examined in accordance with NVIC 10-92, Ch-2,"** as these documents are not normally approved but contain information referred to during our review process. The installation, workmanship, and testing shall be accomplished to the satisfaction of the cognizant Officer in Charge, Marine Inspection (OCMI). The following comments apply:

1. We note from your letter that the cargo on this barge will be Grade A and below. The OCMI must be satisfied that the overall electrical installation will conform to the applicable sections of Subpart 111.105 for hazardous locations and 38.15-15 for Subchapter D vessels.
2. The exhaust system location of cargo pump and/or other engines on tank barges must exceed 10 ft from the nearest source of flammable vapor or gas per 4-1-1/15.3 of ABS Rules for Building and Classing Steel Vessels for Service on Rivers and Intracoastal Waterways 2007 or test that provides an equivalent level of safety as determined by the Marine Safety Center per 46 CFR 110.20-1.

3. A tank vessel designed to carry hazardous material will require an emergency shutdown system per 33CFR 155.780. Please indicate compliance with this regulation to the OCMI.
4. If relevant to this barge, indicate to the marine inspector that the cargo overfill system will comply with the applicable subparagraphs of 33CFR 155.480(b) (2).
5. As discussed in reference (e), the generator set and thermal fluid heater is only to be operated with Grade E Cargos. Any exception to this is at the discretion of the OCMI and shall be endorsed as operational restriction on the vessel's Certificate of Inspection.
6. No electrical or spark producing equipment shall be located inside a Hazardous Area carrying Cargo Grades A through D unless they meet 46 CFR 111.105 and in addition the electrical oil immersion heaters shall meet 46 CFR 111.85

As with all plans and calculations accepted under the provisions of NVIC 10-92, CH-2, the primary responsibility for accuracy and compliance with applicable regulatory requirements rests with the certifying Professional Engineer. The installation, workmanship and testing shall be to the satisfaction of the cognizant Officer in Charge, Marine Inspection (OCMI). Our approval does not in any way limit the authority of the cognizant OCMI to require correction of material, design, construction, installation, etc. that are found not to be in compliance with Coast Guard requirements.

As an agreed upon condition for participating in our Electronic Commerce Program, you must provide a copy of reference (a) through (c) to the OCMI in whose zone the work is to be accomplished.

Dear Mr. Kumaria:

We received references (a) through (d), submitted with your letter dated April 10, 2012, April 11, 2012, and April 12, 2012, under the provisions of reference (g). References (a) through (d) have received partial technical review by the Marine Safety Center for compliance with 46 CFR Part 39, excluding Subpart 39.40. The vapor collection system piping plan, references (a) and (b), are **"Approved in accordance with NVIC 10-92, CH-2."** The pressure drop calculations, references (c) and (d), are **"Examined in accordance with NVIC 10-92, CH-2."** Calculations such as these are not normally marked approved, but are used to verify that the system meets the applicable regulations. The following comments apply:

Subj: CBC 336 & CBC 337, Trinity Marine, Ashland Hulls 4402 & 4403
Vapor Collection System and List of Authorized Cargoes

1. As with all plans and calculations accepted under the provisions of reference (g), the primary responsibility for accuracy and compliance with applicable regulatory requirements rests with the certifying Professional Engineer. The installation, workmanship and testing shall be to the satisfaction of the cognizant Officer in Charge, Marine Inspection (OCMI). Our approval does not in any way limit the authority of the cognizant OCMI to require correction of material, design, equipment, construction, installation, etc. that are found not to be in compliance with Coast Guard requirements.

2. Based on your calculations, this VCS is capable of recovering vapors of the cargoes listed in enclosure (1) at a maximum vapor-air mixture density of **0.336 lbm/ft³**, at a maximum liquid load rate of **5,000 bbl/hr**, and a maximum liquid discharge rate of **3,000 bbl/hr**.

3. In accordance with references (c) and (d), the set-point of the overfill shutdown system shall be no higher than **9 inches** below the trunk top at centerline of each cargo tank.

4. Please provide documentation showing that the barge's high level alarm and overfill shutdown systems are in compliance with 46 CFR 39.20-9. If plans have not already been approved, they should be submitted to the MSC Electrical Branch. For questions concerning electrical plan review contact Mr. Akhtar Hossain, MSC Electrical Branch Chief at the number above.

5. The oil transfer procedures shall include a table or graph showing the liquid transfer rate versus the pressure drop, as required by 46 CFR 39.30-1(b)(3), to the satisfaction of the cognizant OCMI. This information must be taken from the calculations, tables, and graphs contained within references (c) and (d).

6. The tanks share a common vent header, which would allow mixing of various vapors and liquid cargoes. Note this configuration restricts the types of cargoes that can be carried simultaneously.

7. Enclosure (1) contains VCS Category 2, 4, and/or 7 cargoes. Polymerization and residue build-up of these cargoes can adversely affect the operation of the vapor collection system. The barge's owner must develop a method for internal visual inspection to verify that fouling of VCS components is not occurring, to the satisfaction of the cognizant OCMI.

8. References (c) and (d) contain calculations to justify dual loading operations. After reviewing your calculations, we confirm that you adequately demonstrated that these vessels are capable of conducting dual loading operations. Tandem loading is limited to simultaneous collection of those cargoes listed in the vessels' CAA at a maximum combined transfer rate of **5,000 bbl/hr**. Please note that this letter does not constitute final approval for dual loading as the Marine Safety Center only reviews technical calculations for such operations. For final approval you must submit your request to Commandant (CG-5215) with the name of the facility where the vessels will be conducting dual loading operations.

9. The Cargo Authority Attachment (CAA) for the vessel is now available in the Coast Guard's Marine Information for Safety and Law Enforcement (MISLE). The CAA will contain the cargoes found in enclosure (1). Please note that only the cognizant OCMI can issue a vessel's CAA, which is valid only when referenced by and attached to a valid Certificate of Inspection (COI). The OCMI will verify the carriage authority and vapor control tank group characteristics we used to create enclosure (1) are consistent with the vessel's actual construction. Enclosure (2) contains the VCS tank group characteristics and our recommended COI endorsement.

As a condition of your participation in MSC's electronic commerce program, you must provide a copy of the approved drawings to the OCMI, along with a copy of the corresponding MSC approval letter.

Our Project Number for this vessel is **P007994**. Please ensure that future correspondence includes the Project Number or the Official Number of the barge.

If you have any questions concerning our review, please contact Lieutenant Tony Cao at the number listed above.

Vapor Control System (VCS) Categories

Category 1: (No additional VCS requirements above those for benzene, gasolines and crude oil) All requirements applying to the handling of oil and hazardous materials in Titles 33 and 46 Code of Federal Regulations (CFR) apply to these cargoes. Those specifically dealing with vapor control systems are in 33 CFR 155.750, 33 CFR 156.120, 33 CFR 156.170, 46 CFR 35.35 and 46 CFR 39. The cargo tank venting system calculations (46 CFR 39.20-11) and the pressure drop calculations (46 CFR 39.30-1(b)) must use appropriate friction factors, vapor densities and vapor growth rates.

Category 2: (Polymerizes) Polymerization and residue build-up of these cargoes can adversely affect the vessel by fouling safety components and restricting vapor flow which could lead to cargo tank overpressurization. The vessel's owner must develop a method of ensuring all VCS safety components are functional and polymer build-up is not causing an unsafe condition due to increased pressure in the vapor control piping and cargo tanks. The method shall be acceptable to the local Officer in Charge, Marine Inspection. This is in addition to the requirements of Category 1. Please note that a material not normally considered a monomer can be a problem in detonation arrester.

Category 3: (Highly toxic) VCSs for these toxic cargoes cannot use a spill valve or rupture disk as the primary means to meet the overfill protection requirement of 46 CFR 39.20-9. This requirement is in addition to the requirements of Category 1.

Category 4: (Polymerizes and highly toxic) Must comply with requirements of Categories 1, 2 and 3.

Category 5: (High vapor pressure) VCS pressure drop calculations for cargoes with a vapor pressure greater than 14.7 psia at 115 F must take into account increased vapor-air mixture densities and vapor growth rates as compared to Category 1 cargoes. Consult the Marine Safety Center's VCS Guidelines for further information. This requirement is in addition to the requirements of Category 1.

Category 6: (High vapor pressure and highly toxic) Must comply with requirements of Categories 1, 3 and 5.

Category 7: (High vapor pressure and polymerizes) Must comply with requirements of Categories 1, 2 and 5.

SUMMARY

The enclosed analysis show that the 297'-0" x 54' x 12'-0" river service tank barge (CBC 336) meets the requirements of 46 CFR 39. The pressure drop through the vapor piping system and pressure vacuum valve setting does not exceed the maximum design pressure of 2.0 psi for this barge.

The Owner may elect to use this barge in "Tandem" loading and unloading with barge CBC 338 or CBC 337. Pages 8 through 17 show the calculations for this scenario. The pressure vacuum valve setting and pressure drop through system do not exceed maximum design pressure of this barge.

VCS CALCULATIONS

1. CARGO AUTHORITY::

The vapor collection system installed on this barge is designed to carry the cargoes listed in Table 1 and Crude Oil and Gasoline Blends. These Cargoes are to be listed on the barge's Certificate of Inspection.

2. DETERMINING VAPOR_AIR MIXTURE DENSITY AND VAPOR GROWTH RATE:

Pentane (iso-) has the heaviest vapor-air mixture density and the highest vapor growth rate (see Table 1)

3. THE MAXIMUM LIQUID TRANSFER RATE AS IMPOSED BY THE CAPACITY OF THE CARGO VENTING SYSTEM:

Tank 1P is the farthest tank from the P/V valve. Using Crane's Technical Paper No. 410, the total equivalent length (L) for the path is shown in Table 2.

TABLE 2

PIPE/FITTINGS	QUANTITY	UNIT EQ. LENGTH (FT)	TOTAL EQ. LENGTH (FT)
Straight Pipe	1	82	82
Entrance	1	37.05	37.05
T Branch	2	39.91	79.82
8"X6"RED	1	39.88	39.88
T Run Thru	3	13.3	39.9
8" 90 ELL	1	7.98	7.98
		Total	286.63

Using Darcy's Equation, with a 0.014 friction factor and the maximum liquid transfer rate, the pressure drop along the VCS piping between the #1P cargo tank and the P/V valve for each cargo is shown in Table 1.

Using a 5000 bbl/h liquid transfer rate, the vapor-air mixture and air-equivalent volumetric flow rate for each cargo are given in Table 1. At a setting of 1.0 psig, Bergen 6" KLPV Valve has an adequate pressure relieving capacity of air for each cargo listed in Table 1. The greatest pressure drop in the venting system (1.261 psig) does not exceed the cargo tank maximum design working pressure of 2.00 psi.

The maximum vacuum that can exist in a tank is 0.713 psig. The barge is constructed as per ABS rules and regulations for a pressure of 2.0 psig and are tested for a pressure of 2.0 psig. Therefore the maximum vacuum of 0.713 psig is within the design capacity of these barges and an unloading rate of 3000 bbl/h is acceptable.

4. THE MAXIMUM LIQUID TRANSFER RATE AS IMPOSED BY THE RELIEVING CAPACITY OF THE CARGO TANK SPILL VALVE. Non-Installed

6. THE MAXIMUM LIQUID TRANSFER RATE AS IMPOSED BY THE SET POINT OF THE OVERFILL ALARM.

The #3P cargo tank has a trunk top dimension of 54'-0" x 24'-0". The set point of the overfill alarm is set at 8" below the trunk top at tank centerline. With a liquid transfer rate of 5000 bbl/h, the person in charge of transfer of transfer operation has more than 2 minutes to stop the transfer operation before tank overflows. Thus VCS meets 46 CFR 39.20-9.

6. THE MAXIMUM LIQUID TRANSFER RATE AS IMPOSED BY 46 CFR 39.30-1(d)(3).

This requires the sum of the pressure drop along the longest path and the pressure at the facility vapor connection not to exceed 80 percent of the P/V valve setting. The total equivalent length from cargo tank 1P to the vapor connection is given in Table 3.

TABLE 3

PIPE/FITTINGS	QUANTITY	UNIT EQ. LENGTH (FT)	TOTAL EQ. LENGTH (FT)

1. This sheet consolidates critical VCS parameters for MSC Staff Engineers and CG Field Inspectors dealing with Vapor Control Systems. CG Inspectors should verify the vessel's VCS design is consistent with the information listed in boxes 2, 6, 7 & 8 prior to updating the vapor control endorsement on the vessel's Certificate of Inspection. For cases where the information in the VCS PRIS does not reflect the vessel's design the CG Inspector should contact the MSC's Cargo Authority branch.

11. Instructions/Guidelines for the OCMI:

11a. The following is the Marine Safety Center's recommended COI endorsement:

In accordance with 46 CFR Part 39, excluding part 39.40, this vessel's vapor collection system has been inspected to the plans approved by Marine Safety Center letter Serial # C1-1201999 dated April 19, 2012 and has been found acceptable for the collection of bulk liquid cargo vapors annotated with "Yes" in the CAA's VCS column of the vessel's Cargo Authority Attachment, Serial # C1-1201999 dated April 19, 2012.

When the vessel is carrying cargoes containing greater than 0.5% benzene, the person in charge is responsible for ensuring the provisions of 46 US Code of Federal Regulations Part 197, Subpart C are applied.

11b. The MSC approval letter/s must be available at the OCMI's request.

11c. Verify isolation valve at the vapor connection flange is manually operable and designed in a way it is "clearly" open or closed.
