To Whom It May Concern,

Re: Testimony for Spatial & Compliance Pty Ltd

Mount Isa City Council has engaged Spatial & Compliance Pty Ltd, trading as GeoScan3D, on two separate occasions to deliver high-resolution 3D scanning of building assets (such as the Civic Centre, Library and Administration Building), roads (both existing and proposed), footpaths, shared pathways and stormwater pits. Both engagements had a combined value of over \$250,000 (ex. GST). Many projects were accelerated due to the expedition of the survey and investigation works.

GeoScan3D worked closely with our design consultants and provided detailed feature extraction for roadway and shared pathway developments directly from the point cloud data, which was simply fantastic. The project also captured high-resolution imagery used for asset monitoring and condition assessment. The quality of the spatial data enabled accurate measurement of street lighting conductors for blow out calculations supporting future lighting placements, improved confidence in our design decisions, reduced rework, and supported safer outcomes for the community. GeoScan3D provided a professional, collaborative service that added real value to Council's infrastructure planning.

Furthermore, Mark Stanley and Craig Hills were very attentive to any issues raised during the project and was always a pleasure to work with.

I would recommend their services and happy to take any calls regarding their engagement with Mount Isa City Council.

Kind Regards
