

MOVECHO®

#1

Company Identity Market

Welcome to MOVECHO.

We are a Portuguese-Swiss company, established in Portugal in 1989, that has gradually expanded its universe, taking advantage of the consolidation of the technical know-how, the capacity and quality production.

Movecho is specialized in tailor-made projects for various sectors such as luxury retail, hotels, restaurants, corporate and institutional spaces. Working worldwide we offer integrated solutions in the development, production, and installation of bespoke furniture and interiors, including custom millwork services.

Our cutting-edge facility and a resourceful team, distributed by conception and development, design, product engineering, manufacturing and installation, allow us to tackle projects of any size and complexity with ease. We strive to deliver high-quality products and services that meet the needs of our clients, while also exceeding their expectations.

SHOPFITTING

We are a manufacturing industry, whose main production is the equipment for commercial spaces and services, built “to the measure” for each client.

Somos uma indústria transformadora, cuja produção principal são os equipamentos para espaços comerciais e de serviços, construídos “à medida” para cada cliente.

DESIGN

We are not, natively and exclusively, a “design” brand, but a brand with the capacity to apply in other areas and context, the resources of excellence that, as a rule, support the practical productive activity of design.

Não somos, de forma nativa e exclusiva, uma marca “de design”, mas uma marca com capacidade para aplicar noutras áreas e contextos, os recursos de excelência que por norma sustentam a actividade prática produtiva do design.

ENGINEERING

What defines us is product engineering as a process and customization as a commercial-productive methodology, supported by the most sophisticated technology and machinery, including unique software and technical systems developed in house to meet our needs.

Aquilo que nos define é a engenharia de produto enquanto processo e a customização como metodologia comercial-produtiva, apoiadas pela tecnologia e maquinaria mais sofisticada, incluindo software e sistemas técnicos únicos desenvolvidos internamente à medida das nossas necessidades.

MOVECHO is committed to deliver innovative, sustainable, cost and time effective solutions to our clients ensuring the highest level of quality, reliability, and customer service. With a team of more than 200 skilled professionals we offer a comprehensive service that includes all stages from technical development to installation and after-sales support. On our 24,000 square meter facilities we combine the most advanced technological tools and manufacturing methods with the precision of expert craftsmanship. Investing in 4.0 is essential to providing the company with higher flexibility aiming for positive differentiation and competitiveness. At MOVECHO, we understand the unique requirements of bespoke projects and our experience and culture of innovation enhance our ability to adapt and deliver results. Our R&D department is constantly seeking new and improved processes, materials, and techniques to ensure that we can provide our clients with high-quality, tailored solutions that meet their needs and exceed their expectations.

Process Flexibility

Project Management

In close and transparent collaboration with the Customer, MOVECHO ensures permanent monitoring of the project, from the interpretation of the design to on-site installation. Its objective is, therefore, to guarantee the highest quality during all the stages of execution.

Value Engineering

At MOVECHO we employ a comprehensive value engineering approach that identifies and analyzes alternative materials, methods of production and assembly to minimize costs without sacrificing quality or functionality. Backed up by the latest technology such as SolidWorks and Alphacam software our technicians create solutions tailored to all our clients requirements in a collaborative work between all departments.

Prototyping

At MOVECHO, prototyping is encouraged because a prototype simulates the appearance and functionality of the object. This allows the Customer to interact, evaluate, change and approve the most striking features of the product prior to beginning final production.

Production

To execute the project, MOVECHO’s Customer can count on an expert team supported by the latest technology. Horizontal storage system combined with saw and edge banding technology, CNC machines with 5-axis and edge banding technology, edge banders with laser edging. Highlight also for the 9-axis robot and a cell equipped with a hybrid robotic system wich integrates subtractive and additive manufacturing technology - developed exclusively for MOVECHO, - 5-axis waterjet cutting machine, paint booths for different types of painting, including high-gloss. Examples that enable production flexibility, capable of distinguishing MOVECHO both in quality, as well as competitiveness. In the industrial unit where it is installed, it produces both in large scale, and also develops customized solutions with the most precise and refined details, tailor-made as per the Customer’s vision and always with tight quality control.

3D Printing Robot Kuka Machine

3D printing technology is changing the manufacturing landscape by offering the capability to fabricate intricate and organic shapes that were previously unattainable through traditional methods. From conceptualization to final production, the additive manufacturing process provides greater versatility in the creation of parts and components with intricate designs, challenging the limits of what can be achieved in the manufacturing sector. Our commitment to excellence ensures reliable results and cost-effective production. Movecho’s ongoing pursuit of the latest and most efficient technologies and processes with investment in 4.0 projects is crucial in providing the company with increased flexibility and market responsiveness.

Research and Development

Our dedicated research team is committed to continuously exploring and developing innovative solutions for our customers. Their work ensures that our clients trust us to provide customized solutions to their unique challenges. Our research and development process involves identifying problems, analyzing data and trends, creating new solutions and developing new products.

Global Network of Suppliers

To create unique and innovative solutions, we rely on an international supplier network that meets the highest quality standards. Considered from different business sectors such as wood, metal, fabric or glass, our partners help us to provide flexible and quick responses to our clients.

Logistics and Installation

In our logistics center, we coordinate all the shipping process, including a thorough analysis of the material to be dispatched. Our skilled and qualified teams provide technical support in each rollout and assembly worldwide.

After Sales Service

The partnership with MOVECHO does not end with the installation of the project on-site. MOVECHO guarantees constant maintenance support. Our team is available to provide assistance and troubleshooting, so that our customers can have the best possible experience with their shopfitting solution.

#2 Technology Materials Production

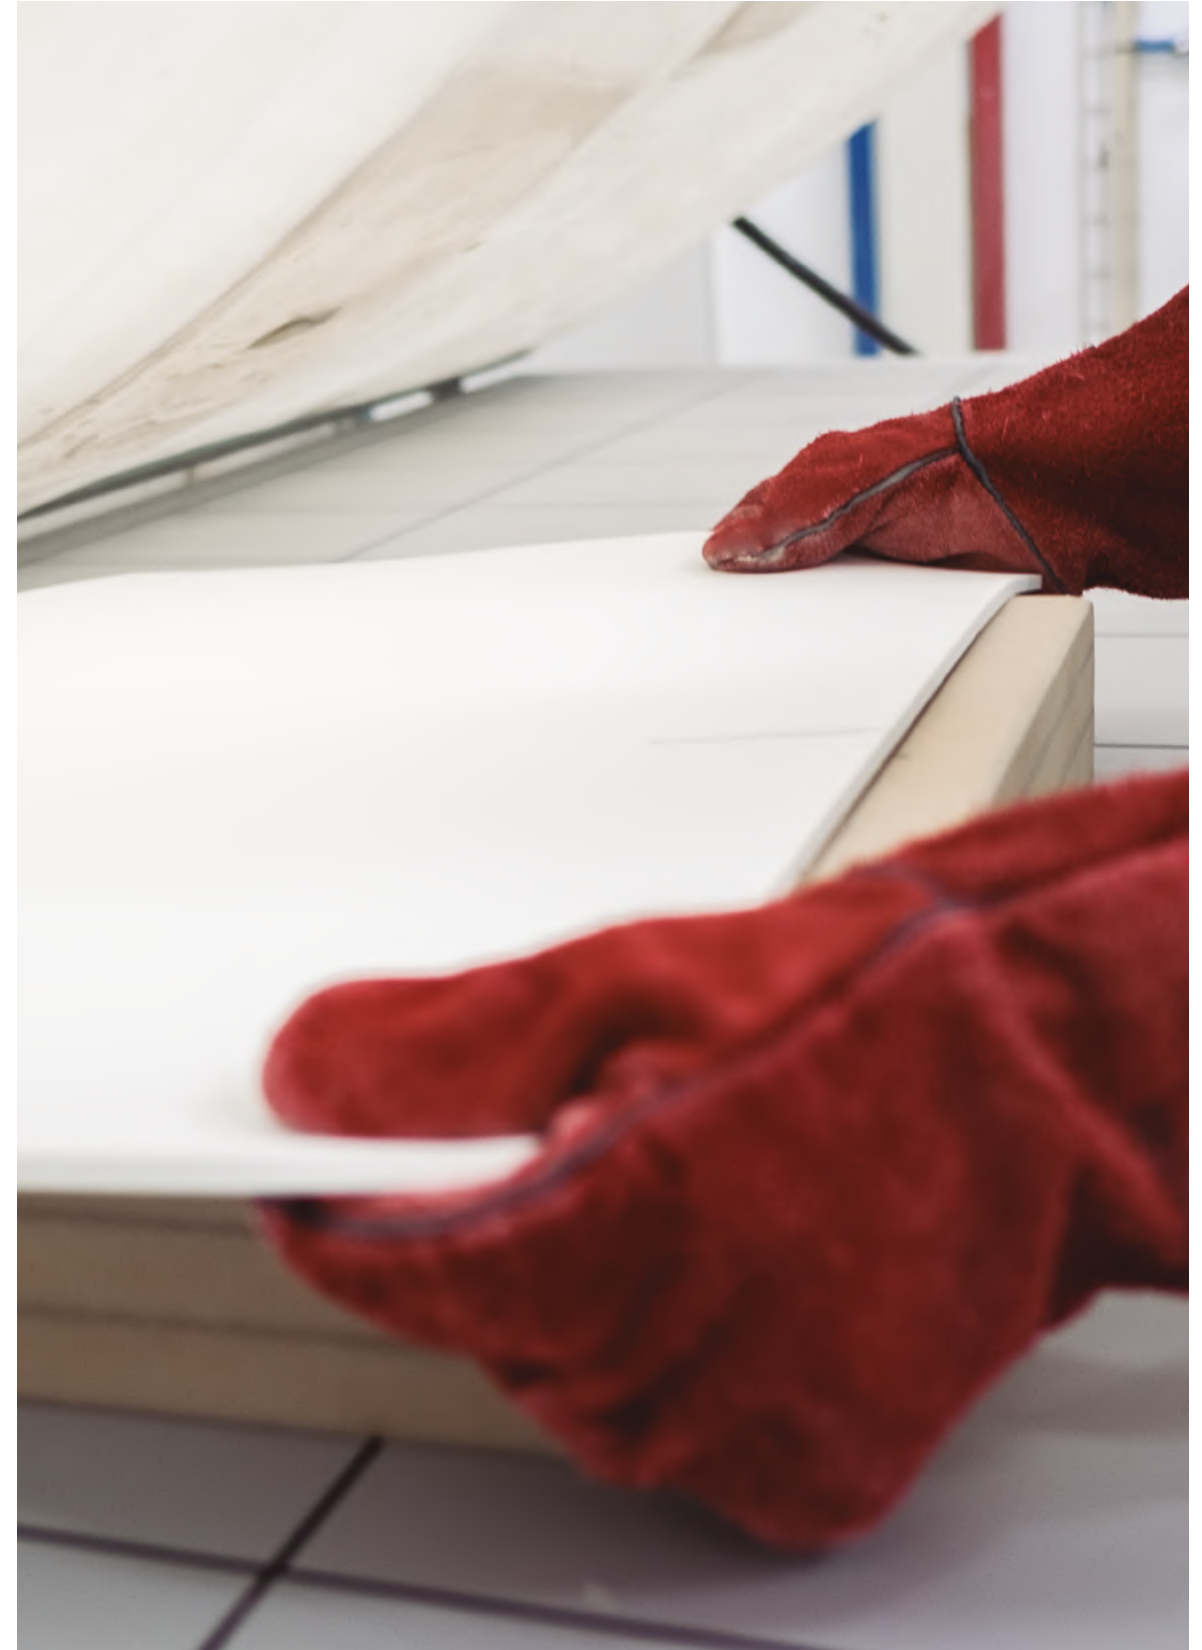

MOVECHO uses the most sophisticated technology and machinery available not only because it needs to do so, but because of its permanent modernization policy, including software and unique technical systems developed internally, to suit the company needs. To ensure the maximum quality of the final work, MOVECHO relies on its network of experienced suppliers which are truly business partners.

The predominant materials and productive procedures in the industrial activity and facilities of MOVECHO are as follows:

The **agglomerated** and **solid wood** of different densities, types and finishing, that can be transformed from its cut, to the machining, to the lacquering.

The **Solid Surface**, in its different transformation phases: hot moulding and in vacuum.

The **cork**, in 4 distinct procedures: free grain, agglutinated grain and moulding, multilayer and in mould and plug, from the grain.

The **acrylic**, as a complementary material, including engraving finishing.

Other accessory materials, such as **glass** or **stone** are outsourced to company partners.

#3

Product Engineering Research Design Development

Nowadays, MOVECHO is a company with a strong orientation towards research and product development, focused on high quality and demands built from its human resources and productive potential that it assures in every working hour.

MOVECHO was not originally an exclusive “design brand”. Notwithstanding, it positioned itself as a brand with the ability to apply to other areas and contexts the resources of excellence that usually sustain the productive practice activity of design. Nevertheless, MOVECHO has a known and award winning history of collaboration with designers and design incorporation in the operative process of the company.

Throughout these years in the marketplace, MOVECHO has realised that the way it stands in the market shows its value and offer.

However, the attentive and strategically dynamic way it does so opens other market perspectives - together with fast mutations of the social, economic and cultural contexts - that lead it to enlarge and enrich production.

That is the way MOVECHO relates to design. From a matured state oriented by technical research supporting production, to structurally offer to the market an approach of products in the profile of “design products” that, from that history of experience and constant innovation, will lead to the redefinition of the productive profile of MOVECHO.

#4

Quality and Resources Management Environment Ergonomics

Together with the investment in the technical and technological expertise, in the training and well-being of its employees, in the strategy and creative component of the company, MOVECHO invested in the certification of its services, which shows its dedication and firmness with the new challenges and quality in an environmentally sustainable functioning and attitude.

One of MOVECHO's priorities is to ensure a constant renewal process of the natural resources, increasingly more rare.

RESPONSIBLE PRODUCTION

Optimized Technology for waste reduction

ZERO WASTE

Energy recovery of chipboard waste that provides the heating for the entire plant

WATER RESERVOIR

Retention basin where rainwater is stored to use for irrigation or firefighting

ECO EFFICIENT INSTALATIONS

Energy efficient equipment

CIRCULARITY

100% recovery of wood-derived waste

ECOLABEL

Use of OEKO-TEX and ecolabel components

PHOTOVOLTAIC PANELS

The plant becomes an energy producer

Productive activity must not and cannot be incompatible with environmental balance.

Sustainability

We do not conceive industrial progress without caring for nature. We believe that taking care of our environment and communities is not only the right thing to do, but it also contributes to a better future for all.

To promote this environmental balance we have been incorporating the principles of circular economy, which offer promising outcomes, including reduced waste, increased resource efficiency, cost savings, and new business opportunities. Embracing these principles can help create a more sustainable future for both the company and the planet.

MOVECHO has its own water reservoir to use rain water to reinforce the response capacity of its own installed network of fire-fighting and to contribute to the terrestrial and aerial supply in the forest fire-fighting.

The installation of photovoltaic panels and the use of efficient equipment are some examples of the work developed by MOVECHO. Currently we are developing solutions to decarbonize our company. decarbonize our company in the coming years. Our goal is to minimize our ecological footprint and operate with a near-zero carbon impact. We have developed an Integrated Management System (IMS) that helps us identify and understand these requirements, as well as the environmental variables that may impact our activities.

By implementing our IMS and continuously refining our processes, we aim to provide our customers with the quality they expect while also doing our part to protect the environment and promote sustainable forestry practices. Whether through product development, supply chain management, or other activities, our goal is to be a leader in responsible, sustainable business practices.

MOVECHO is in the forefront of technical, material and technological sophistication research, which allows it to give a customized answer to each client following an exceptional dedication, demand and quality profile.
