Excess Flow Check Valve

Precision-engineering
for faster, easier repairs
and commodity change

The team at McKenzie Valve is proud to introduce our Excess Flow Check Valve a robust safety solution designed to automatically restrict flow in the event of equipment damage or separation. With an all-metal construction and no elastomers required, this valve delivers consistent, reliable protection and is available in both Stainless and Carbon Steel to suit your tank car's specific needs.

Excess Flow Check Valve Technical Specs

- Restricts flow to equipment above when external equipment is sheared off
- Full metal assemblies — no elastomers required
- Stainless and Carbon Steel options available to meet your car's needs

Benefits

- Automatically limits flow to prevent loss of commodity during equipment damage
- Durable all-metal construction ensures long service life with minimal maintenance
- Available in Stainless and Carbon Steel for compatibility with various applications

The McKenzie Valve Difference

We believe that customers should have choice when it comes to their tank car valves and parts. That is why the team at McKenzie Valve is working to show you that we go the extra mile for our customers.

- Unmatched product availability and responsive service
- Complete range of well-designed, reliable products
- Continuous innovation and process improvement
