High Flow Pressure Relief Valve

Precision-engineering
for faster, easier repairs
and commodity change

The team at McKenzie Valve is proud to introduce our High Flow Pressure Relief Valve designed for maximum reliability and safety in high-pressure tank car applications. Built to handle critical situations with exceptional flow capacity, this valve offers standard mounting for straightforward installation and adaptable material options to meet diverse commodity requirements.

High Flow Pressure Relief Valve Technical Specs

- High flow capacity to evacuate commodity in critical situations
- Standard mounting for easy installation
- Material options for elastomers and body metal to suit your commodity's needs

Benefits

- High flow capacity ensures rapid evacuation under overpressure conditions
- Standardized mounting allows for simple and efficient installation
- Material and elastomer flexibility allows customization for your commodity's requirements

The McKenzie Valve Difference

We believe that customers should have choice when it comes to their tank car valves and parts. That is why the team at McKenzie Valve is working to show you that we go the extra mile for our customers.

- Unmatched product availability and responsive service
- Complete range of well-designed, reliable products
- Continuous innovation and process improvement
