

NOW AVAILABLE

Thermometer Well

Precision-engineering
for faster, easier repairs
and commodity change

The team at McKenzie Valve is proud to announce the launch of our Thermowell — a durable and dependable solution designed to protect temperature sensors and ensure safe, efficient monitoring in rail tank applications. Built with flexibility and reliability in mind, the Thermowell is compatible with a range of materials and elastomer options to meet your commodity's specific requirements.

Thermometer Well Technical Specs

- Mounting = ¾" MNPT
- Material options: Carbon Steel, Stainless Steel, and Corrosion Tested Stainless
- Numerous elastomer options available

Benefits

- Cap vent holes can warn of pressure while the cap remains safely secured
- Simple and reliable design for consistent performance
- Material options for elastomers and metal allow customization for your commodity's needs

The McKenzie Valve Difference

We believe that customers should have choice when it comes to their tank car valves and parts. That is why the team at McKenzie Valve is working to show you that we go the extra mile for our customers.

- Unmatched product availability and responsive service
- Complete range of well-designed, reliable products
- Continuous innovation and process improvement
