Enventure Successfully Deploys SET® Expandable Liner Hanger for Williston Basin Operator

[Houston, Texas] August 20, 2025 — Enventure Global Technology, a leader in solid expandable well solutions, has successfully deployed its 4-1/2 in. x 7 in., 32 ppf SET® Expandable Liner Hanger system with a 16,150 ft x 4-1/2 in., 13.5 ppf conventional liner for an independent oil and gas operator in the Williston Basin.

This successful installation reinforces the performance and versatility of Enventure's liner hanger system, engineered to address complex downhole environments with simplicity, efficiency, and reliability. The deployment highlights the technology's adaptability to a variety of well conditions and its ability to integrate seamlessly with conventional completion programs.

"Our SET® Expandable Liner Hanger establishes a new standard for operators that have experienced issues with setting Liner Hangers in challenging environments due to torque and pressure limitations of existing offerings," said Brandon Hoff, Deputy Executive Chairman at Enventure. "This deployment in a very long horizontal lateral commonly seen in the Williston Basin is further evidence of our commitment to delivering robust, reliable solutions that help operators reduce operational risk, simplify installation, and enhance production performance."

The SET® Expandable Liner Hanger's no-moving-parts design eliminates the common mechanical failure points seen in traditional hanger systems, while eliminating the possibility of premature release of the liner during deployment. Its high torque and rotational capability make it ideal for extended-reach applications and challenging directional profiles.

This operation exemplifies Enventure's engineering excellence and the practical benefits of its expandable technology platform, empowering operators to meet today's operational challenges with confidence and precision.
