

Sustainable Manufacturing in Southeast Asia

Project Launch

Overview

The Ethical Supply Chain Program and International Sustainable Chemistry Collaborative Centre (ISC3) are launching a sustainable manufacturing project focused on supporting factories in Vietnam, Indonesia and other countries in Southeast Asia.

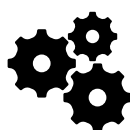

Partner

Project Objectives

Improve working conditions and production practices related to chemical use in factories

Strengthen local factory capability through training and knowledge transfer

Promote gender-sensitive occupational health and safety & training

Encourage the adoption of recycled plastic materials in product design

Introduce and strengthen female-friendly grievance channels

Anchor sustainability expectations within the global toy industry and broader stakeholders

Register now to join the upcoming online briefing session:

Join the briefing to learn more about how the project can support you to reduce your environmental risk, improve ESG performance and strengthen worker safety in the supply chain. Register by the end of this week by replying to this email.

20th January, 2pm CEST - Online
