

Full Inspection Overview

An inspection report provides registered auction buyers with a detailed review of the condition of the vehicle along with the proposed reconditioning expenses they may encounter upon taking ownership of the vehicle. The bottom line is that the inspection report allows buyers to view the vehicle without seeing it in-person.

These features allow you to:

1.

Initiate a full vehicle inspection
2.

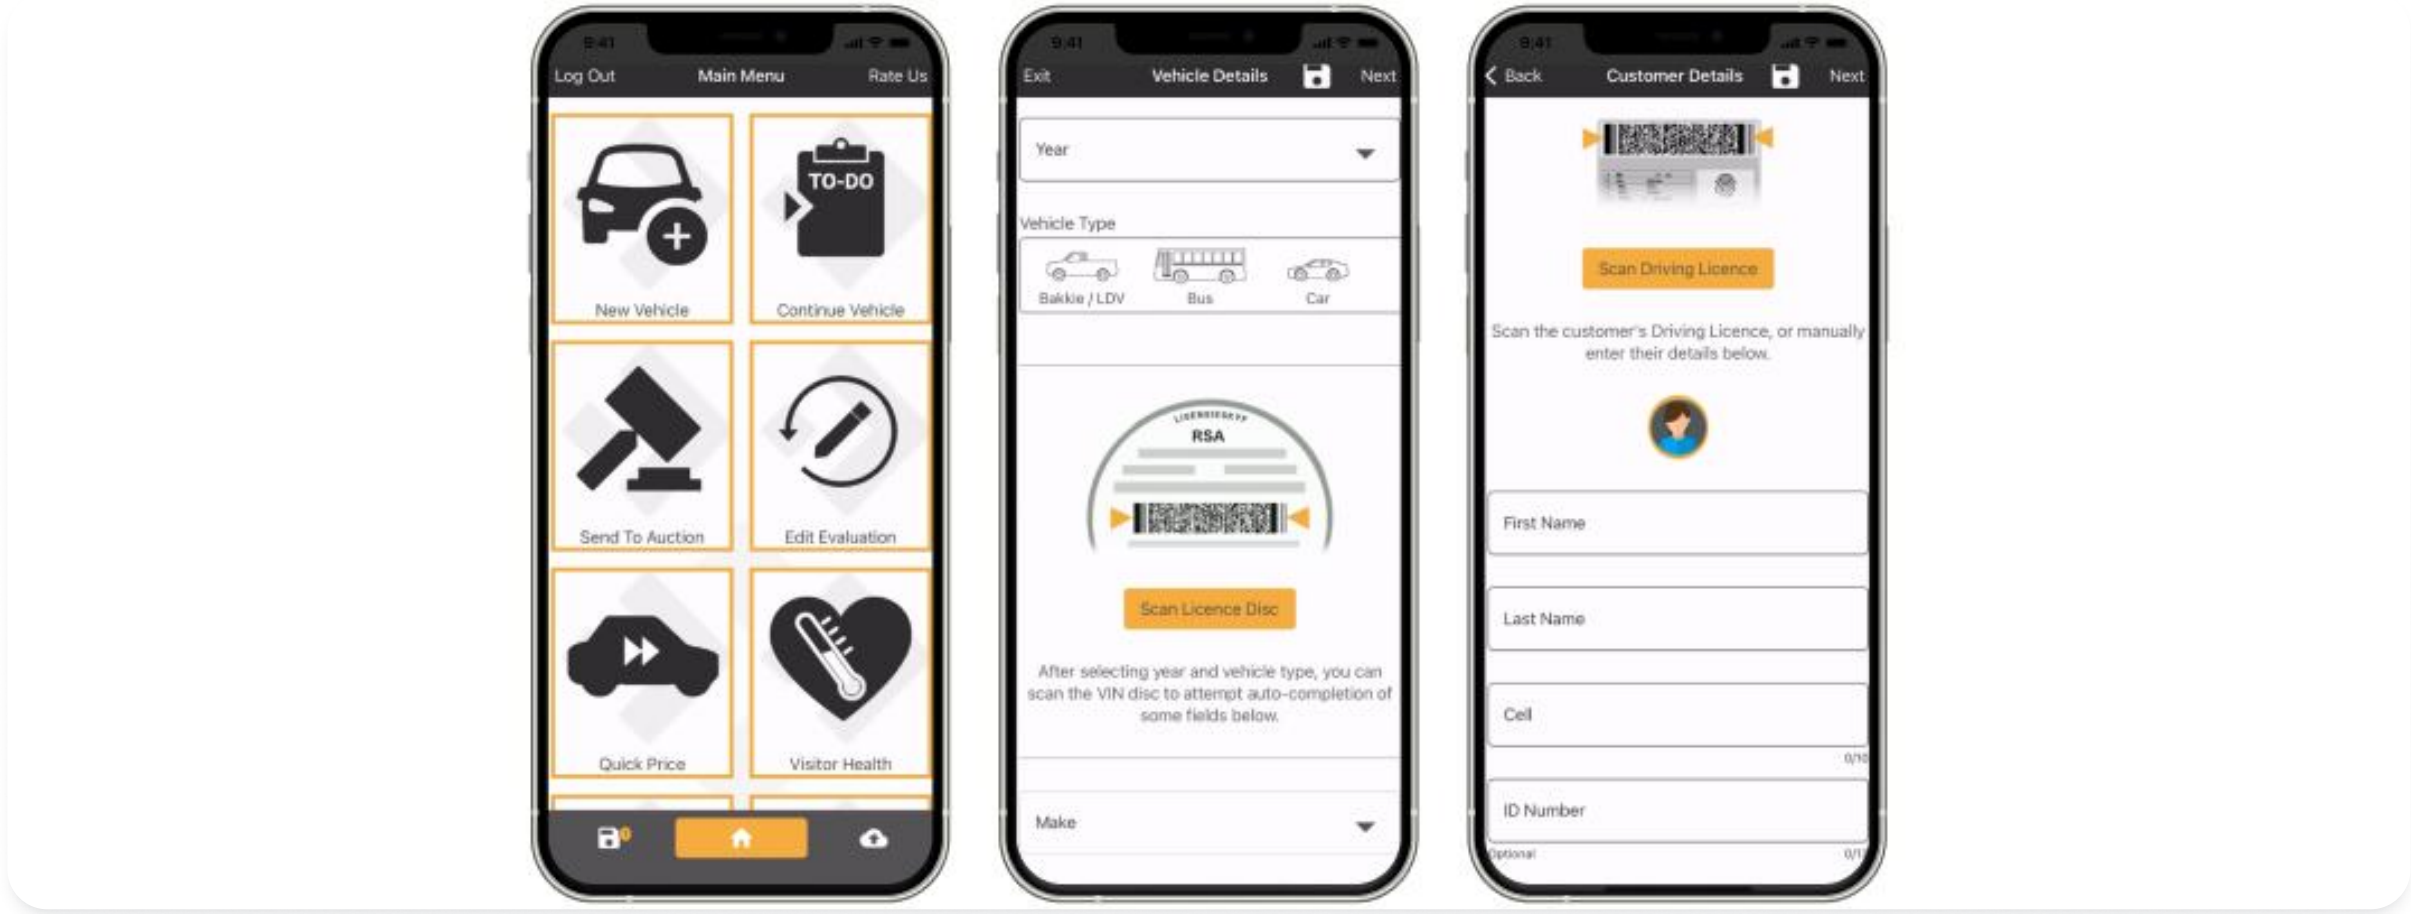

Submit vehicle condition details
3.

Capture uniform vehicle images
4.

Acknowledge full inspection report

Initiate a full inspection

From the mobile app, scan the driver’s licence card and the vehicle disk to capture the details of the customer and the vehicle you’re inspecting. Take note: certain details must be captured manually.

Capture Vehicle Condition

You can capture the extensive details of the vehicle damage using the inspection tool, including the estimated reconditioning amount and images of the damaged area.

The built-in camera feature provides a Ghost function and Stabiliser that guides the inspector to capture images at the correct angle.
