## About Fiberfast

### *Precision in Fiber Refining*

Fiberfast specializes in high-performance refiner plates for the MDF industry. Using advanced metallurgy, precision CNC machining, and state-of-the-art dynamic balancing machines, each plate ensures uniform wear, optimal cutting angles, and long-lasting durability.

Fiberfast refiner plates improve fiber refining efficiency, maintain consistent fiber quality, and reduce energy consumption. Trusted by manufacturers worldwide, they deliver stability, reliable performance, and support higher productivity on MDF production lines.

### **Commitment to Excellence**

Quality, Reliability, Innovation

At FiberFast, quality goes beyond the product. Through meticulous material selection and rigorous testing, every refiner plate meets the highest standards of performance and durability.

Driven by innovation and continuous improvement, FiberFast helps MDF manufacturers reduce downtime, enhance efficiency, and achieve consistent refining results — making FiberFast not just a supplier, but a partner in performance.

Investing in the Future:  
**Capability • Quality • Sustainability**

FiberFast is moving forward with a focused investment plan to strengthen its core manufacturing capability and ensure long-term sustainable growth.

From 2025 to 2026, the company’s initiatives center on upgrading key equipment, advancing automation, and integrating ESG principles into every stage of production — driving both quality excellence and environmental responsibility.

**2025 –  
Quality Enhancement  
& ESG Integration**

Focused investment in precision testing and heat treatment systems ensures more stable product quality.

New energy-efficient technologies strengthen material toughness while reducing emissions. FiberFast combines technical progress with sustainable action for long-term reliability.

**2026 –  
Automation & Advanced  
Quality Assurance**

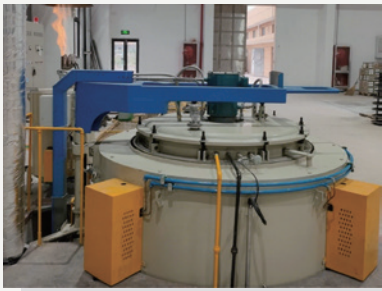

Next-phase investment targets smart automation and high-precision inspection systems. Enhanced process traceability and digital control improve efficiency and consistency.

FiberFast continues to build a modern, sustainable production environment that meets global standards.

# Production Facilities

*Sand Mould  
Making Machine*

*Tempering Machine*

*Quenching Machine*

*Automatic Foundry  
Machine*

*Grinding Machine*

*Edge Grinding  
Machine*

*Dynamic Balancing  
Machine*

*Impact Toughness  
Tester*

Behind every FiberFast refiner plate stands a facility built for precision and progress.

Every upgrade, every detail, reflects our pursuit of quality and commitment to excellence.

Refiner Plates Product

54" Segment  
compatible with 50/54-1CP (Andritz refiner)

58" Segment  
compatible with 54/60-1CP (Andritz refiner)

62" Segment  
compatible with EVO 52 (Valmet refiner)  
or M50 (Metso/Sunds refiner)

50" Segment  
compatible with 50/54-1CP (Andritz refiner)

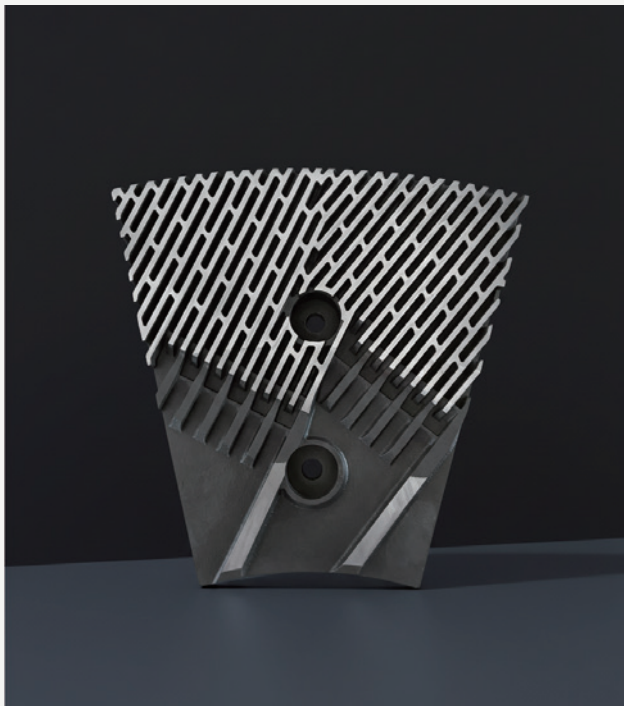

54" Segment  
compatible with EVO 56 (Valmet refiner)

58" Segment  
compatible with 54/60-1CP (Andritz refiner)

48" Segment  
compatible with Sufoma 48" defibrator

48" Segment  
compatible with Sufoma 48" defibrator
