bottle colors** planned

The dotch cycle

 producers

 retailers

 consumers

 dotch

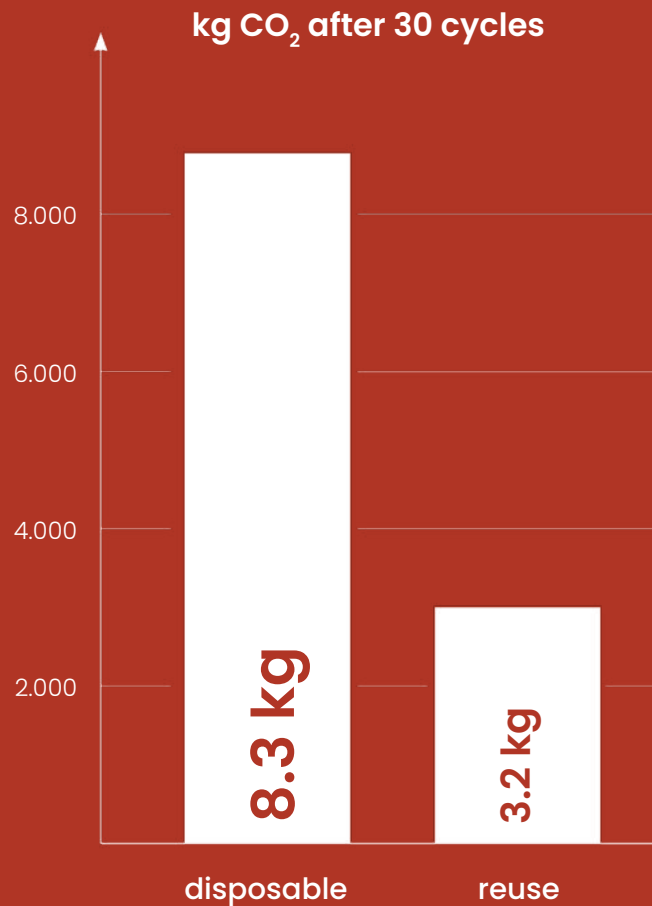

At **dotch**, we offer the reusable system as a **full service**. We take care of **pool management, container development, empties logistics** and **cleaning** the returnable bottles.

Organic wholesalers and organic chain stores throughout Germany already stock products in the dotch reusable bottle

and many more...

The climate chooses reusable

If glass is **reused**, the ecological impact is immediately reduced due to the elimination of **new production** – our reusable bottle has a better **CO₂ balance** than the comparable disposable glass bottle from the **second circulation** onwards.

This is not a life cycle assessment calculation according to DIN 14040/44, but an approximate consideration of the CO₂ emissions for an oil mill with bottling in Saxony and nationwide delivery to organic food retailers. The 0.5 l single-use Bordeaux bottle with the same distribution channel serves as a comparison to the Dutch 0.5 l pool bottle.

Into reusable?

We offer you

Full Service-Circulation management

Support in **converting your production**
to reusable packaging

Support for your **Retailers**

Long-term **cost savings** through
scaling effects
