The reuse system
for glass packaging

The future is reusable

Massively rising **industrial CO₂ prices** and the extended producer responsibility enshrined in the **PPWR** make reusable packaging the most **economically and ecologically sensible solution** for glass packaging.

Our pool containers save emissions right **from the first complete cycle**.

This is not a life cycle assessment calculation in accordance with DIN 14040/44, but rather an approximate estimate of CO₂ emissions for an oil mill with bottling facilities in Saxony that supplies organic food retailers throughout Germany. The 0.5-liter disposable Bordeaux bottle with the same distribution channel serves as a comparison to the 0.5-liter pool bottle.

Our reuse system

We understand **reuse** as a **comprehensive service** and design it to be **as convenient as single-use** for all users:

 We provide **producers** with reusable containers instead of disposable ones.

 We are the **single point of contact for retailers** in terms of handling and logistics.

 **Consumers** can return our bottles as they would other deposit bottles

 Our **pool containers** for oils, vinegars, fruit and vegetable preserves are **compatible** with most common **filling systems and handling standards**.

 Upon request we can provide an **individual calculation** of **CO₂ savings**.

Our containers

Standard bottles for oils, vinegars and sirup

- Volumes: 250ml, 500ml, 750ml and 1L
- PP 31,5 muzzle compatible with pourers
- Custom six-pack crates for easy handling
- returnable at the deposit machine
- certified for up to 50 cycles

Standard jars for canned goods, sauces and antipasti

- Volumes: 370 ml, 580ml and 720ml. additional volumes in development
