

RETAIL LED LIGHTING RETROFITS

Upgrading retail environments to energy-efficient LED lighting systems can reduce energy consumption by up to 60% while significantly decreasing maintenance costs due to LED's extended lifespan. Enhanced illumination creates superior shopping experiences that drive customer engagement and increase sales conversion by helping customers better examine products and navigate retail spaces.

LARGE REGIONAL SUPERMARKET

One of the premier regional sources for fresh produce, our client engaged us to help improve the safety and security of their customers before they even enter their welcoming stores. Multiple locations required updated exterior lighting solutions, and we utilized high-performing Viento light fixtures to deliver the required performance standards while maintaining an aesthetically appealing design that complemented their brand image.

SPARR FARM & BUILDING SUPPLY

We executed a comprehensive lighting retrofit across two Farm Supply Store locations. The project included converting 450 fluorescent sales floor and office fixtures from T8 fluorescent lamps to energy-efficient 12-watt LED tubes, achieving 70% energy savings and a 30% increase in light levels. Additionally, we replaced 60 HID fixtures with new LED high-bay systems, delivering 80% energy savings while providing four times higher light levels compared to the original fixtures.

PAR MAR STORES

We retrofitted over 75 store locations, upgrading interior lighting including cooler cases and complete exterior systems including gas station canopies. The project delivered energy savings, improved light levels for customers, and enhanced safety and security across all locations.
