

MUNICIPAL/K12 LED LIGHTING RETROFITS

UMS Lighting Services has completed over 500 school district installations, from energy-efficient retrofits to sophisticated dynamic color tuning systems for educational environments. We also serve municipal and government sectors, delivering lighting solutions for administrative facilities, logistics centers, security installations, and correctional institutions that meet demanding operational requirements.

MITCHELL MIDDLE SCHOOLS

We retrofitted over 3,600 fixtures across the school district, encompassing three schools and including all new emergency lighting systems. Additionally, we upgraded all three gymnasiums with state-of-the-art LED high-bay solutions featuring full dimming capabilities. Our comprehensive retrofit increased light levels throughout the schools by 20% and boosted gymnasium illumination by 40%, while still delivering substantial energy savings for the school system.

GLEN ROSE ISD

We were awarded the lighting installation project through a competitive bid process. The scope of work included retrofitting 6,264 fluorescent fixtures to energy-efficient LED systems. We coordinated scheduling closely with the Assistant Superintendent of Operations throughout the entire project timeline. All installation work was performed during evening hours to avoid disrupting daily school activities, and we successfully completed the project within 8 weeks.

DEVINE ISD

We worked collaboratively with the school district to retrofit 3,899 fluorescent and HID fixtures to energy-efficient LED systems. Our work schedule was carefully coordinated with the Devine ISD maintenance team, with all installation activities performed during nighttime hours to avoid disrupting daily school operations. We successfully completed the project within 7 weeks.
