TOTAL SEAL

PISTON RINGS

If It Takes A Piston Ring, We Can Build It.

Over 50 years ago Total Seal® Piston Rings invented the Gapless® piston ring that changed the automotive industry. Today, we are much more than Gapless®. We design and manufacture piston rings for every type of internal combustion engine or compressor.

Our piston rings have been improving the efficiency of race engines in every form of motorsports for decades, but we also do it for OTR diesel engines, aviation engines and stand-alone compressors. Utilizing piston ring design to greatly increase piston function and efficiency is what we do best.

From extreme high horsepower race engines to powerful stationary engines for industrial use, Total Seal® can take care of all your piston ring needs.

- **1.9" bore to 16.0" bore and everything in between**
- **Production quantities of 30 rings to 3,000 or more**
- **The greatest selection of piston rings in the world**
- **A wide range of available special coatings**
- **Any bore, axial thickness or radial dimension**
- **Custom ring design and manufacturing services**
- **Unmatched personal technical assistance**

Our design and content options allow us to tailor rings to the specific needs of an engine. As a result, that engine runs more efficiently.

There's good reason why more race teams and engine builders rely on Total Seal® piston rings than any other ring manufacturer.

GAS-PORTED Piston Rings

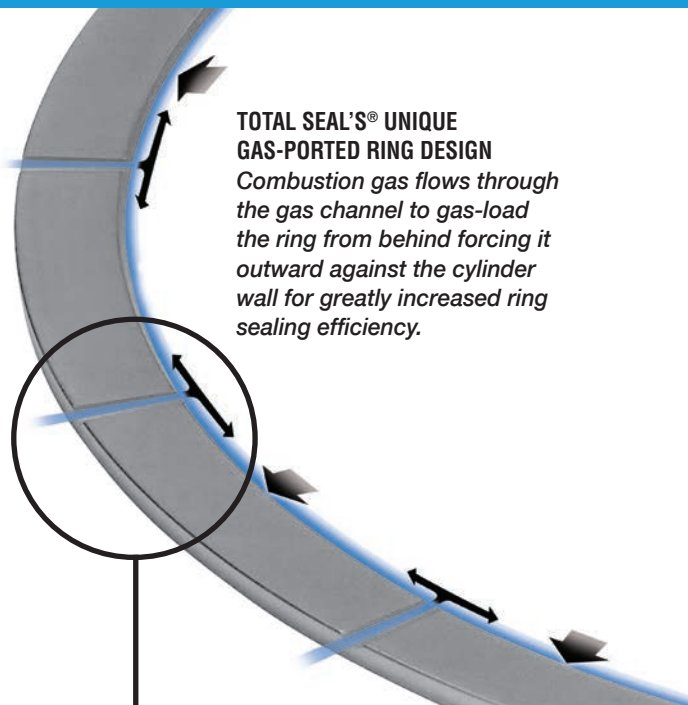

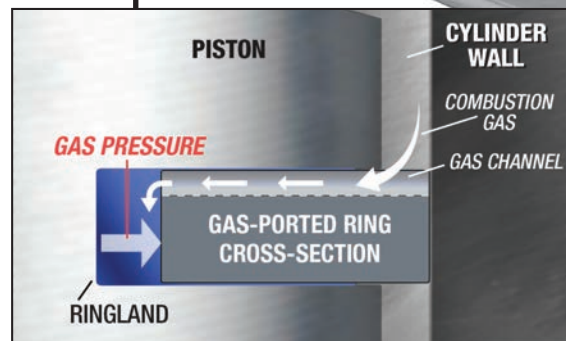

Unlock Hidden Horsepower with Gas-Ported Rings

The primary job of the piston ring is to create the seal between the piston and the cylinder wall. Our new Gas-Ported piston rings represent an evolution in ring seal. The conventional practice of thick, heavy, high tension rings that fought against cylinder pressure to maintain seal has been revolutionized. Instead of fighting cylinder pressure, gas ported rings harness those forces and use them to improve ring seal. These advanced rings benefit all engines, especially turbocharged and supercharged engines.

- Gas-ported performance without the need for gas-ported pistons
- Features strategically sized and placed horizontal slots in the ring allowing combustion gas to enter through the groove and behind the ring to gas-load the ring providing greatly improved ring sealing.
- Extensively tested in virtually every form of engine with the same increases in ring sealing time after time.
- Applications are available in both steel and ductile iron for top ring placements. When ordering simply ask for Gas-Ported on your top ring sets.

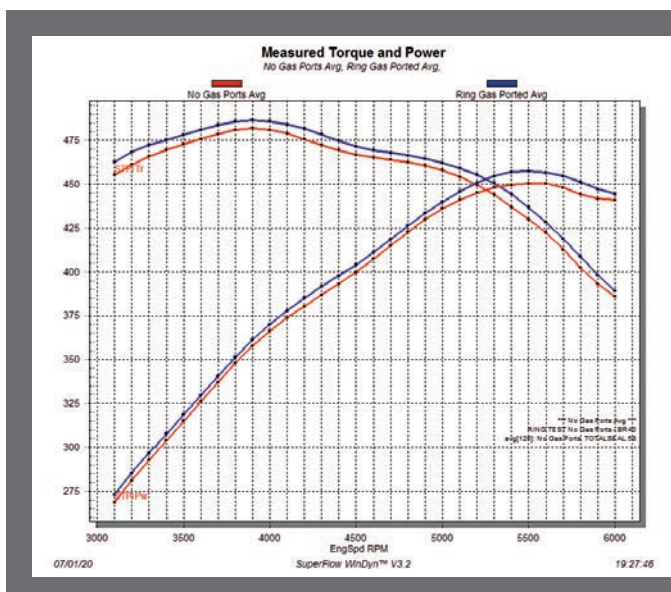

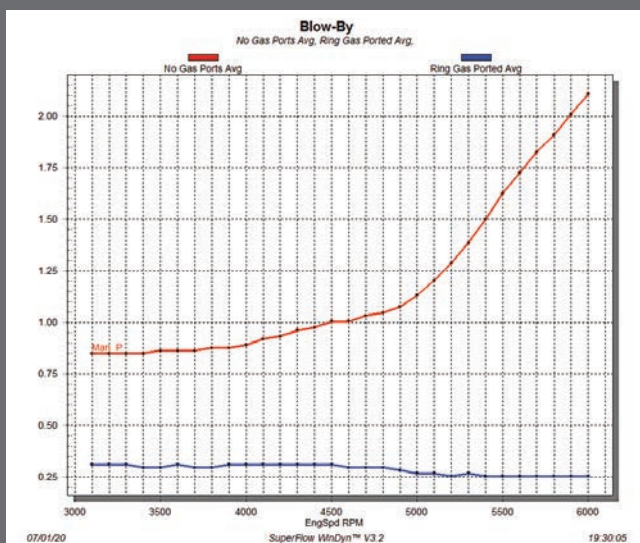

Available in all popular standard and metric bore sizes, including:

- 1.0mm x 1.0mm x 2.0mm ring combinations
- 1.0mm x 1.2mm x 2.8mm ring combinations
- 1.2mm x 1.2mm x 3.0mm ring combinations

A Simple Ring Upgrade Provides Proven Performance Gains:

- Better Ring Seal
- More Horsepower
- Less Blow-By
- Can Be Used with Gas-Ported Pistons

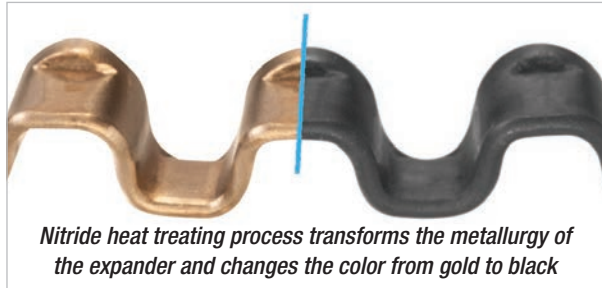

Proven increased horsepower and reduction in blow-by

Ndurance

EXPANDED PERFORMANCE OIL RINGS

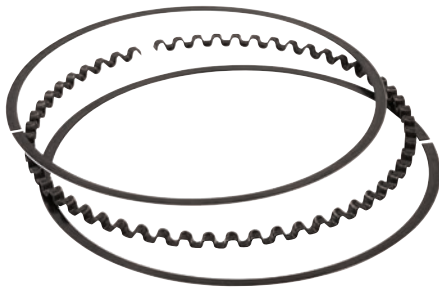

Ndurance Oil Rings Greatly Expands the Ring Tension Over Conventional Oil Rings to Provide Maximum Ring Seal and Increased Performance

NEW Total Seal® **Ndurance** Expanded Performance Oil Rings were specifically designed with turbo and high boost engines in mind. More boost means thicker oil and requires higher oil ring tension to prevent detonation from poor oil control.

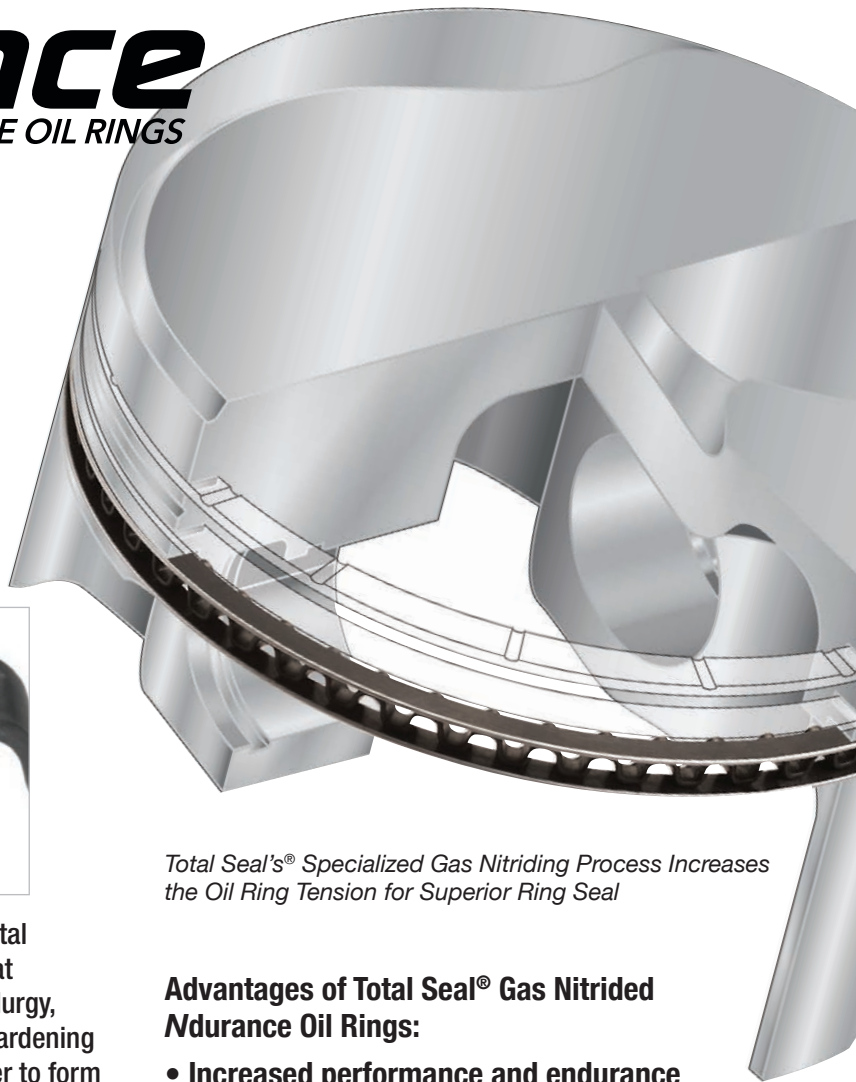

Nitride heat treating process transforms the metallurgy of the expander and changes the color from gold to black

To increase the tension on **Ndurance** Oil Rings, Total Seal® incorporates a special gas nitriding steel heat treatment of the expander. This changes the metallurgy, grain structure and color of the steel. The nitride hardening process integrates onto the surface of the expander to form the nitride layer. This allows the portion of metal below the surface layer to maintain a level of malleability that prevents cracking under extreme conditions.

*3-piece
Ndurance
Oil Ring*

Total Seal's® Specialized Gas Nitriding Process Increases the Oil Ring Tension for Superior Ring Seal

Advantages of Total Seal® Gas Nitrided **Ndurance** Oil Rings:

- Increased performance and endurance
- Zero to minimal distortion
- Precise dimensional control
- Improved wear and corrosion resistance
- Increased fatigue strength
- Extended life
- Added abrasive wear resistance
- Enhanced surface lubricity

Total Seal® **Ndurance** Expanded Performance Oil Rings are available for most applications including turbo and high boost engines in a variety of sizes. Please contact us with your specific application.

GAPLESS® Piston Rings

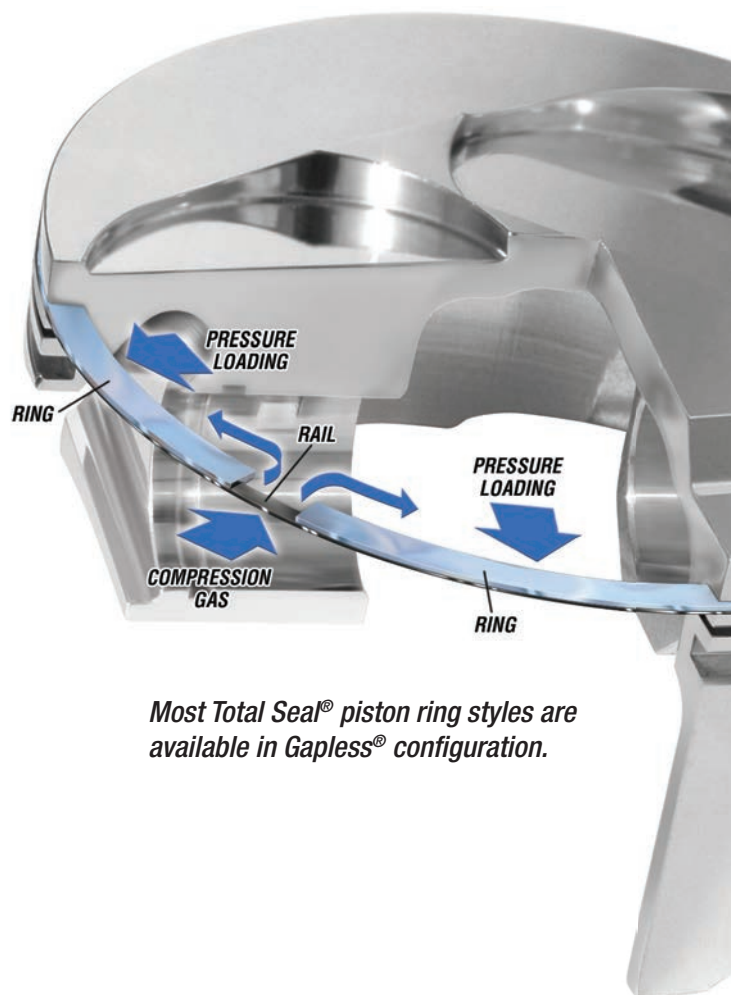

The Horsepower Producing Piston Ring Design that Changed the Industry

Total Seal's patented Gapless® piston rings provide increased performance through unmatched sealing of the cylinder and combustion gasses in the combustion chamber. Increased horsepower and torque along with longer engine life are just a couple of the reasons why Total Seal's Gapless® piston rings are the best rings available. Here are many more.

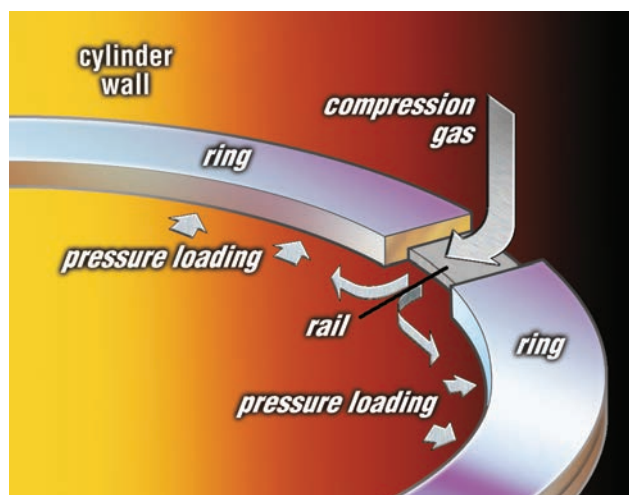

- Elimination of blow-by
- Increased horsepower & torque
- Longer engine life
- Improved consistency
- Longer ring life
- Better sealing & less friction
- Saves money (fewer tear-downs)
- Cleaner, cooler engine oil
- Better oil control
- Increased intake signal
- Wider torque curve
- More engine vacuum

How Gapless® Piston Rings Work

As shown in the illustration, compression gas is deflected by the rail into the piston groove and aid in pressure loading the ring throughout the 4-stroke cycle. At the same time the rail also and most importantly closes off the combustion gas leak path created by the ring end gap. This gap is the primary cause of blow-by in a 4-cycle engine. With a conventional type ring as the ring and cylinder wear the ring end gap increases and the blow-by figures increase. The Gapless® ring blow-by figures are not affected by this wear, as the ring end gap increases it is blocked by the rail portion of Total Seals patented interlocking 2-piece design stopping the blow-by at the source. Conventional style rings when newly installed will show leak down figures of 7% or higher these figures can quickly exceed 20% or higher after a surprisingly short period of time. Gapless® rings on the other hand when newly installed typically show leak down figures of 2% and lower and will should remain the same throughout the life of the engine.

Most Total Seal® piston ring styles are available in Gapless® configuration.

GAPLESS® DIESEL Piston Rings

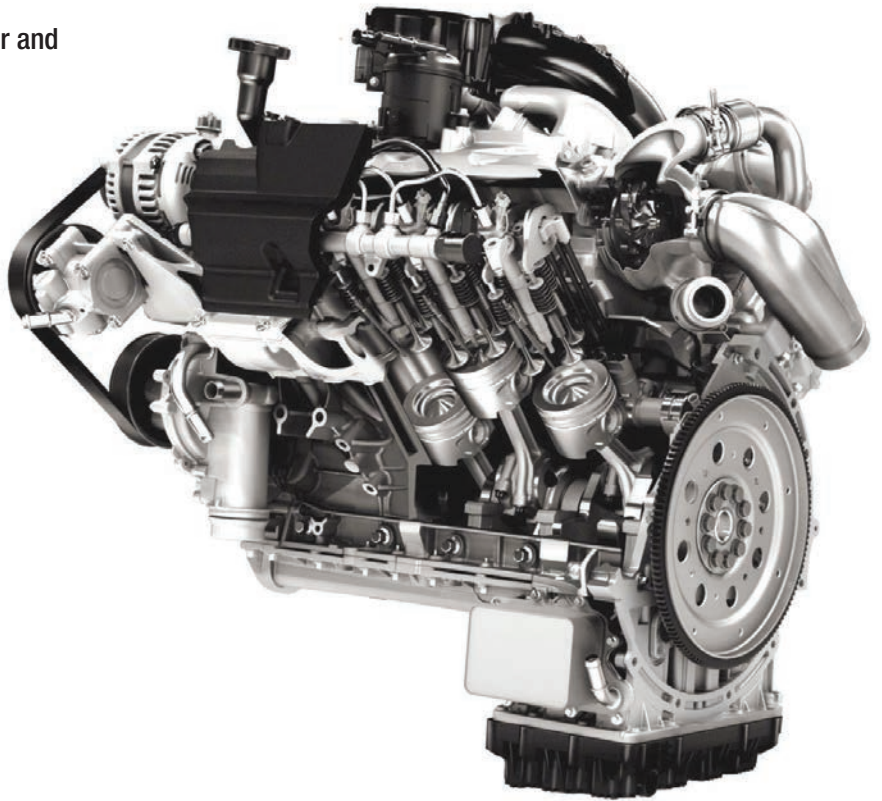

Gapless® Piston Ring Technology Isn't Just For Racing

Soot contamination increases engine wear and decreases oil life. Closing the gap on the 2nd ring stops soot contamination and reduces blow-by. Since diesel engines utilize high compression ratios, Total Seal® Gapless® second rings help these engines unleash their full potential, turning them into true horsepower and torque monsters.

- Better Sealing = More Boost
- Increased Horsepower & Torque
- Reduced Oil Contamination
- Cooler Running Engine Oil

Sets available for:

- 5.9L Cummins
- 6.6L Duramax
- 6.7L Cummins
- Ford Powerstroke - 6.4L to 7.3L
- Custom sets also available

& More

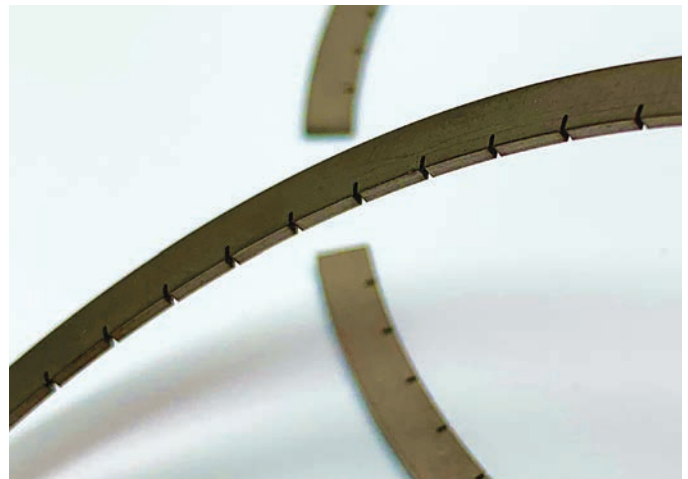

Total Seal® Has The Right Piston Rings For Your Application And Requirements

Beyond our Gapless® and Gas-Ported ring sets, we also provide a wide array of unique rings that improve engine performance and durability.

Our patented Diamond Finishing process yields surface finish measurements below 3 Ra, which provides maximum ring to groove sealing. These designs are not mutually exclusive. These technologies can be combined to produce the ultimate in efficiency and longevity.

- M2 Tool Steel -
Conventional, Gapless® & Gas Ported
- Diamond Finish™ - from 2.6 in bore to 5 in bores
- Total Conform™ - from .5mm to 2mm thickness

At Total Seal®, Precision and Selection Doesn't Stop With Our Piston Rings

We don't just make the world's most efficient piston rings. Total Seal® also offers a great selection of premium ring installation tools and accessories.

Whether you're building a chassis, a transmission or an engine, you know there is no real substitute for having the right tools for the job. We are with you all the way to the completed, running engine.

- Power Ring Filer
- Custom Sized Ring Compressors
- Adjustable Ring Compressors
- 2-piece design Split Ring Compressors
- Ring Squaring Tools
- Ring Installation Pliers
- Leak Down Tester
- Profilometer

Total Seal also offers Quickseat and Assembly Lube that will help you with your final engine assembly.

Proudly manufactured at Total Seal® in Phoenix, AZ, this is the ultimate tool for precision piston ring grinding and the finest Power Ring Filer available on the market today. The Total Seal Power Ring Filer is extremely accurate and includes an integrated dial indicator for precise read out. It features an exceptionally smooth high output 1/15 HP ball bearing motor that operates at 3000 RPM. Included with the Filer is a 3" x 1/8" grinding wheel, 2-1/2" x 1/2" de burring wheel and a diamond wheel dresser. There are two models available: 110V (Part No. PRF-812DW) and 220V (Part No. PRF-822DW). The Total Seal Power Ring Filer is a "must have" tool for serious engine builders and will make ring filing a super accurate and simple process.

PISTON RING FUNCTION

Sealing for Piston Efficiency and Horsepower

There are three leak paths for blow-by to escape past the piston into the crankcase and we all know that any blow-by leaking past the piston is horsepower lost. Here is a look at each path.

THE FACE OF THE RING – The face of any compression ring can have many characteristics that may help or hinder cylinder sealing. The profile (barrel, taper..etc) can vary in many different ways that help the ring stay seated through piston rock over. Face coatings can also make a substantial difference with cylinder sealing depending on your cylinder wall material.

THE SIDES OF THE RING – The side surfaces of the ring, that is the surfaces that seat against the piston flank itself are often overlooked but equally as important in sealing an engine. Simply, the flatter and smoother these sides are, the better they will seal against the piston and stop any blow-by from traveling around the ring land and into the crankcase.

THE END GAP – Here is the correlation...the larger the end gap, the more blow-by and power reduction your engine will see.

Now let's take a look at the strokes in a four stroke engine and the importance that cylinder sealing means to each.

INTAKE – On any naturally aspirated engine, the better the rings are sealed inside the cylinder and against the piston, the more intake charge (air and fuel) will fill the combustion chamber. Ring seal is the only thing in a normally aspirated engine that draws air / fuel into the cylinder.

COMPRESSION – The better the engine is sealed on the compression stroke, the higher the percentage of intake charge that previously filled the cylinder will be utilized. Ring seal is the only thing preventing the charge from leaking past the piston and into the crankcase.

POWER – During this explosive event, the more explosion the rings keep above the piston, the higher the force will be exerted downward on the piston, resulting in more torque and horsepower.

EXHAUST – The more efficiently the cylinder disposes of exhaust, the more that event in overlap, will help prime the intake stroke for cylinder filling.

SIMPLY STATED...AN INCREASE IN PISTON RING SEAL RESULTS IN HIGHER VOLUMETRIC EFFICIENCY WHICH EQUALS INCREASED TORQUE AND HORSEPOWER.

Total Seal® has worked hard trying to address each of the circumstances above. We have developed a number of separate ring design lines from Gapless® to Gas-Ported, all intended to improve the sealing of whatever engine you may have. Please look through our catalog, call and ask questions, and Total Seal® will work with you to decide which ring set might be right for your situation.

QUICK REFERENCE CHART

SET TYPE	EXAMPLE	GAPLESS?	TOP RING	2ND RING	OIL RING	APPLICATION
CR	CR3690 35	No	Ductile Moly Conventional	Cast Tapered Face	3 Piece, Standard Tension	Naturally Aspirated Street Performance / Restoration
