MOBY850

TRANSFORMER

The RIMAC crushing plant range is designed to operate in the demolition, recycling, extraction, and mining sectors.

The dual-feed RIMAC MOBY 850 TRANSFORMER plant allows users to adapt the machinery to all crushing requirements. Among its advantages are the MULTIFUNCTIONALITY of the crushing unit, which enables the quick replacement of the jaw crusher with other RIMAC systems through a rapid coupling system, and INTERCHANGEABILITY, allowing for the swift replacement of most components in case of failure (engine, tracked undercarriage, electrical system, etc.).

Other benefits include fast setup times, easy maintenance, high reduction and production capacity, and an advanced electronic control system.

FEATURES

- The variable-speed vibrating grizzly feeder ensures a constant feed to the crushing chamber for optimal productivity.
- Tracked undercarriage enables rapid movement of the machine.
- Hydraulic foldable main and side conveyor belts for easier transport.
- Bidirectional crushing unit with hydraulic adjustment; opening and closing operations can be performed even during operation.

PLANT DIMENSIONS

Transport length	mm 8413
Transport width	mm 2338
Transport height	mm 3033
Weight	16 ton

OPTIONAL ACCESSORIES

- Remote maintenance, diagnostics, data monitoring, and archiving system
- Side conveyor belt
- Belt magnetic separator
- Multifunctional remote control
- Water misting system
