Security Headwall Level 2

The Security Headwall provides typical hospital devices in a high security area. The lockable door covers all electrical and medical devices but leaves nurse call, communication, entertainment, and other low voltage connections available to the patient.

*Ligature resistance is not absolute.
Always ensure patients are monitored.

Features/Specifications:

- Lockable doors securing services
- Typically begins 12-24" above the floor
- Extends to the ceiling to eliminate potentially dangerous upper surface
- Covers conduit and piping connections
- Low voltage connections are available through the door
- Ligature resistant*

Options:

- Available in stainless or powder coated steel
- Build to order in any size
- Any configuration of services available
- Available with lock options including flat keys and tubular keys to meet your security needs
