

Dear Valued Customer,

We would like to take this opportunity to express our sincere gratitude for your continued support as we mark our first year in business as **Blast Worx Limited**. While this is just the beginning of our journey under our new name, the experience and industry knowledge we've built over the years have been instrumental in enabling us to serve you with the highest standards of excellence.

As many of you are aware, the past financial year has presented significant economic challenges for New Zealand. We, along with many of you, have navigated these difficulties together. While some of these challenges persist, we remain fully committed to providing you with exceptional products and services to help your business thrive.

Throughout this time, we've encountered some unconventional tactics from competitors. However, we want to reassure you that we stand firmly behind every product we offer. Each product is carefully selected with the specific needs of the New Zealand market in mind, ensuring it meets the high standards you expect and deserve. As I've always been taught, we can control what's within our power—our behaviour, professionalism, product quality, and integrity—while recognizing that we cannot control the actions of others.

Once again, thank you for your trust and continued partnership. We greatly value your business and look forward to building on our relationship for many years to come.

Please find our special offer for April attached.

Warm regards,

Paul, Gavin, Mike, Barry & Reid

PRODUCT HIGHLIGHT

THE NEW GVS ELIPSE FULL FACE MASK

BLAST WORX
EXPERIENCE, QUALITY, PERFORMANCE

When working in industrial coating, especially abrasive blasting or airless spray painting, correct respiratory protection is often overlooked.

Unlike a fall from height, the dangers of airborne contaminants aren't immediate. You don't feel it straight away, so it's easy to get casual about it. But the truth is, long-term exposure to paint fumes, dust, and chemicals can cause serious, irreversible health problems, including occupational asthma, lung damage, and even cancer, often showing up in your mid to later life when it's too late to undo.

That's why AS/NZS 1715 and 1716 standards exist in New Zealand: to guide you in choosing and correctly using the right gear. Whether it's a Supplied Air Respirator (SAR) for Abrasive blasting, or high painting with Isocyanates, a Powered Air Purifying Respirator (PAPR – battery blower pack) for regular jobs with moderate exposure, or a tight-fitting Full-Face Mask or Half-Mask for lower-risk tasks.

Wearing the right respirator today protects your health tomorrow, because once the damage is done, there's no going back.

Elipse Full Face Mask Key Features

- Designed to be compatible with most safety helmets.
- Extended field of vision: filters have a lower profile by being incorporated into the mask body.
- For use with new and existing particulate and combined Elipse low profile filter cartridges.
- Lightweight, only 350 grams (without filters)
- Low maintenance, no tools required for disassembly and cleaning.
- Comfortable fit, the face seal is made of soft silicone for comfort, durability and a secure fit.
