

EcoTransIT World — Terms Applicable to Your Use

Reference data provided via the Cozero SaaS Services

The Cozero SaaS Services incorporate reference data and calculation results derived from **EcoTransIT World (ETW)**, a service operated by Ingenieurgesellschaft für Verkehrs- und Eisenbahnwesen mbH (IVE mbH). The following terms apply to the Customer's use of ETW-derived reference data and calculation results as embedded in the Output of the Cozero SaaS Services.

These terms are an extract of the end-user-relevant provisions of the EcoTransIT World Business Solutions End User License Agreement (Version 2.0). They are provided for transparency and form part of the Cozero Partner Terms (cozero.io/partner-terms). The full licence agreement governs the relationship between Cozero and IVE mbH. In the event of any conflict between these transparency terms and the Cozero customer terms, the Cozero customer terms shall prevail as between Cozero and Customer.

1. Permitted use

The Customer may use, store, publish and convey the calculation results generated via the Cozero SaaS Services that are based on EcoTransIT World, for the Customer's own transport and emissions reporting purposes, and share them with its own contract parties.

2. Restrictions

The Customer shall not:

- copy, republish, frame, download, transmit, modify, rent, lease, loan, sell, assign, distribute, license, sublicense, reverse engineer or create derivative works of the EcoTransIT World Business Solutions or the underlying reference data;
- provide access to the EcoTransIT World Business Solutions to third parties, except as expressly permitted;
- use any data mining, robots, reverse engineering or similar data gathering and extraction methods;
- use the EcoTransIT World Business Solutions, or the underlying method, to prototype or build competitive or other software products (including the data model, algorithms, methodology, interfaces or scripts).

3. Attribution

Where calculation results based on EcoTransIT World are published, EcoTransIT World / IVE mbH must be credited as the source, and the copyright notices of the provider must be retained.

4. No warranty / accuracy

EcoTransIT World data and calculation results are provided “as is”. The correctness of the calculations depends on correct input data, and absolute accuracy is not guaranteed. The data is intended to support — not replace — the Customer's own assessment.
