It's possible to keep your own and others' Instagram videos safe from being lost forever. To do this, you can save them to your Collections folder within the app. If you want to download a video post, you'll need to use a different method since saving it directly to your camera roll is no longer an option in the three-dot menu. However, you can still save it to your Instagram Collections or record your screen to capture it. There are also third-party apps available that allow you to download Instagram videos.You can save Instagram stories as clips or full videos by using either your native app's built-in feature, third-party apps, or screen recording. Here are steps for Android and iPhone users: For Android use Video Downloader for Instagram or AZ Screen Recorder to download your video. On iOS, you could get the Blaze: Browser & File Manager app and select "Copy Link" to paste into it. Always ensure proper credit is given if you share someone else's content.Given article text here is that it does not have a built-in option to download desired videos, forcing users to rely on third-party apps for saving content, even for learning how to post on Instagram from PC. However, there are numerous reliable websites available, such as DreDown, which enable easy video downloading by copying the Instagram URL and pasting it into their platform. Other web-based services like DownloadGram and Download Instagram Videos also offer similar functionality.The demand for downloading Reels on Instagram led to the introduction of an official feature by the platform. The share menu allows users to save any video on the app, with the same functionality available on both Android and iOS versions. To download a Reel, open it in the app, tap the Share icon, swipe left to select Download, and wait for the process to complete. If issues arise, alternative methods such as using third-party apps or screen recording can be employed. For instance, on Android, the Insget app can be used by copying the video link and pasting it into the app. On iOS, InstDown is a free app with ads that allows users to save Reels and Stories.To download Instagram videos, first launch your web browser and visit Publer (website). Paste the link of the desired video and click on "Download". After that, click "Download" to Your Device to save it locally. Keep in mind that downloading and resharing Instagram videos without permission is piracy. This guide teaches you how to download Instagram videos for personal use only.To download an Instagram video, first ensure it's processed and has the "Download" option available. Tap or click this option to start the download process. For mobile devices, locate downloaded videos in the Gallery or Photos app; for computers, check the Downloads folder. Be cautious of false download links, as some websites may try to redirect you to other pages or install additional software. To initiate the download, follow these steps:1. Find the video you want to download on Instagram by searching for its creator's name in the search bar.2. Ensure the video is ready to play and the sound is turned on. If necessary, play the video once to reveal the "Reply" button.3. Start screen recording using your device's built-in feature: - For Android devices, swipe down from the top of the screen twice, then scroll left to find the Screen Record icon. - For iPhone and iPad, swipe down from the upper-right corner to access the Control Center and tap the Screen Recording icon. - For Windows devices, press the Windows key + G to open the Game Bar and click the record button. - For Mac devices, open QuickTime Player, select New Screen Recording, and then choose Internal mic.To find saved videos on various devices, follow these steps:* On iPhone or iPad, check the Photos app for screen recordings.* On Windows, look in the Videos folder under Screen Recordings.* On Mac, choose where to save the recording during the process.* On Chromebook, default saving location is the Downloads folder.To download an Instagram video:1. Find the desired video by logging into the app or accessing it via a web browser at instagram.com.2. Tap the bookmark icon below the video playback area to add it to your saved list.3. Access your saved content by tapping your profile icon and selecting the three horizontal lines in the upper-right corner.If you're looking for alternative methods to download Instagram videos, consider using websites like igvideodl.com.To broadcast live on Instagram, tap the record button while in live mode and start sharing. Your followers will be able to watch and comment on the stream in real-time. The comments made during the broadcast won't affect the final saved video. After ending a broadcast, you can save it by tapping the Save button at the top right of the screen. This feature is exclusive to your own live streams and can't be used for others' broadcasts.The saved videos will be MP4 format and can be easily uploaded to other social media platforms like Facebook or Twitter. If you missed a live stream, saving it as a video allows you to share it with your followers later. However, keep in mind that downloading multiple videos can quickly fill up your phone's storage space. Before saving new videos, make sure your device has enough free space to avoid any issues.Given article text here You can save videos from instagram by recording screen or by clicking save to camera rollTo save Instagram videos and reels to collections, follow these steps:First, go to the Instagram app, choose the video or reel you want to save, and tap the three dots. Then, select "Save" from the options.Alternatively, use third-party apps like InSaver for iOS or ETM Video for Android to download reels quickly without trimming. Simply copy the link of the post, paste it into the app, and tap the download button.You can also save reels directly by going to the reel, tapping the three dots below the share option, selecting "Save", and choosing a collection from your existing one.Given article text here If you want to save your Instagram videos on your phone or computer, there's an easy way to do so without taking up storage space. The method varies depending on whether you're using the official Instagram platform or a third-party app. Heres how to save them:If you want to download an instagram reel to your computer you have to use third party apps. You can use the video downloader application which you install in your phone and then select the instagram reel that you wanted to download paste the link into the Video Downloader and type downloadWhen posting on Instagram, remember that you are the copyright owner of all content posted by you. This means that other users cannot repost or reuse your content without your explicit consent. If you want to download a video from an Instagram post for personal use, it's okay as long as you respect others' copyrights. However, if you plan to share or use someone else's content, you need their permission. Using copyrighted material without permission can lead to serious consequences, including account suspension or even permanent deletion. So, before sharing any content, ensure that you have the necessary permissions.To save a video from the internet, simply paste its URL into the app, and it will automatically download to your device. For Instagram Shorts, a third-party app like Video Download is necessary. To use this method, copy the video's link, open the app, paste the URL, type "download," and the video will be saved for later viewing. Be aware that downloading copyrighted material without permission can infringe on Instagram's terms of service. However, if you're keeping videos private, it may not be a concern. Different countries have varying laws regarding online content, so always check local regulations before downloading or sharing videos.
