As Liza here, we'll explore what makes these templates so special. You might have seen makeup artists using them or heard someone ask, "What's a face chart?" In this article, we'll break down what they are and how they can be used to communicate looks and styles in the world of makeup. But did you know that face charts have evolved beyond professional use? Today, anyone with an interest in makeup can enjoy using them! Face charts are powerful tools for artists, and Liza believes they're often underestimated. So, why do people love face charts? Well, even though drawing with makeup on paper might sound strange, there's a whole community that swears by these templates. It's all about creativity and self-expression! Face charts can help you elevate your look and bring out the artist within. If you're curious about what they are and how to use them, or if you want to try creating stunning makeup art yourself, this article is for you! But first, let's talk about where face charts come from. You might have seen them at MAC Cosmetics stores - those prints or drawings on the counters or walls. They might look like coloring pages, but there's more to them than meets the eye! Face charts are valuable tools that can help makeup artists communicate effectively with their clients. And now, they're also represented on social media, so you've probably seen them around. Read on to discover how face charts work and what benefits they bring to the world of makeup! To many professional artists, the concept of face charts has remained relatively unchanged since the 1980s, with minimal evolution until recent times. The MAC face chart has long been considered the industry standard. However, NYX Cosmetics has disrupted this status quo, paving the way for a new era in facecharts. For makeup artists, face charts serve as a secret tool, providing a visual language to communicate their creative vision. These charts can be used for client collaboration, skill sharpening, and even brand storytelling. In addition to its practical applications, face charting has evolved into a creative movement, transcending its functional roots. We'll delve deeper into this exciting development later. Now that we've explored the magic behind face charts, let's examine how they translate into real-life scenarios: from business savvy consultations to personal skill-building and portfolio showcases. Whether you're a makeup artist or simply a creative enthusiast, face charts offer a wealth of opportunities for self-expression and artistic exploration. My Ultimate Guide to Mastering Makeup: Unlocking Creative Genius As a makeup enthusiast, I've discovered the secret to elevating my craft. By harnessing the power of face charts, you can unlock limitless creative potential and transform your skills. This magical tool allows me to pre-design each model's look beforehand, ensuring cohesion and flawless execution on photo or video shoots. Face charts serve as a roadmap, detailing product placement and color choices, eliminating guesswork and guaranteeing stunning results. This technique is particularly valuable in the entertainment industry, where it saves time and streamlines the creative process. But here's the best part: face charts are not just for pros! By practicing on paper, you can improve your overall makeup skills, including hand firmness, color palette mastery, blending techniques, and understanding of light and shadow. This philosophy can also help you develop a deeper appreciation for human facial features and limitless creativity. In fact, the 10,000-Hour Rule applies to makeup artistry as well. It takes dedication, knowledge, and practical experience to become a true master of your craft. By embracing this concept and surrounding yourself with knowledgeable mentors, you can accelerate your growth and achieve mastery. So, don't be afraid to learn from others, practice extensively, and build upon your foundation. Remember, only by devoting yourself wholeheartedly to your passion can you truly master it. When you're passionate about makeup, creating is a way to connect with yourself and express your creativity. Time flies by as you get lost in the process. You won't think about daily worries; instead, you'll be completely focused on blending and creating with your favorite products. "It's mesmerizing," says one enthusiast, "spending hours with my own makeup collection." You might have noticed digital face charts popping up on social media. Personally, I find them less meaningful because they lack the soul of handcrafted art. They also don't involve any actual makeup application - no powder, pigment, or brush strokes. So, while they might be useful for giving a quick color idea or overview, they're not ideal for learning how to blend makeup. On the other hand, digital face charts can be a fun and efficient way to create designs quickly. They can even inspire people to recreate their own versions. Popular accounts that share these designs are definitely worth checking out. In my opinion, the rise of digital face charts is actually a sign that people are valuing true skill and handcraft more than ever before - just like how makeup artists will always be in demand, not replaced by digital variants. If you're interested in learning more about the best face chart templates, I recommend reading this article. I reminisce about my first encounters with face charts during esthetician school days. To be honest, I wasn't too fond of them back then due to the pandemic restrictions we faced at the time. We weren't allowed to practice on each other's faces because it was difficult to do so effectively while wearing masks. Instead, we moved on to using fake heads for practice. However, when I graduated amidst a mask mandate, face charts became a nostalgic reminder of a stressful period marked by uncertainty and anxiety. Unsurprisingly, I got rid of my old charts the next day because I wanted to distance myself from that experience. Fast forward to today, I've developed a new appreciation for face charts. They're essentially a beauty-themed coloring book! Not only do they help me relax but also enable me to organize my makeup collection into looks I can actually wear. This is especially helpful when I have a busy social calendar and not much time to plan. Our MSA face chart offers more realistic proportions compared to the typical gaunt faces often seen backstage at fashion shows. The benefits of this specific design include one open and one closed eye, making it easier for makeup artists to plan out various looks. The history of face charts dates back to the 1980s when MAC Cosmetics introduced their iconic Face charts. These simple line drawings allowed makeup artists to plan and record specific looks for future reference. The use cases range from planning a look for a bride to recording the products and placement used on a model's face for a fashion show. To create your own face chart, feel free to use any real makeup you like! I personally prefer thicker paper than normal copy weight when using liquid foundations. You can also add random art supplies like white markers or colored pencils to make it more engaging. Here's how I got creative with my makeup brushes on paper! Using regular makeup tools, I applied my look to this printout. You can even download it and use it digitally! For a more realistic finish, try using sponges or your fingertips to blend the colors. I had an absolute blast re-creating runway looks on my iPad with these charts. I got inspiration from Jill Stuart's Spring/Summer 17 collection - specifically that stunning cornflower blue look. However, I decided to give it a lilac twist instead! Before we dive in, note that some of my lines might appear different from the printout due to the printer running out of ink (oops!). Just a heads-up! To start, I applied tinted powder all over with a brush and blended it using my fingers. Next, I used bronzer to define the contour, adding dimension to the paper. Shadow followed, also applied with a brush and then blended with my fingers. Finally, I added pale pink lip color (using shadow) and highlighted with white paint. Voila! Step back and admire your work! What's next? If you love it, make sure to label what products you used and where - then stash them in clear pages for safekeeping. Or, if you're feeling adventurous, try using 3D heads like I did in school (disco-themed, anyone?). These are super affordable (\$10!) and a blast to use - just be prepared to get creative and have fun! How do you play with your makeup collection? Have you ever tried face charts before? Let me know in the comments!
