

AHD-WAOP SB

Alarmpanel with Emergency Call (BNWAS)

- ***Additional alarm panel with emergency call function for watch alarm systems according to BNWAS***
- ***Suitable for bridge use, with automatic dimming of the controls***
- ***Built-in module, easy to integrate into existing systems***

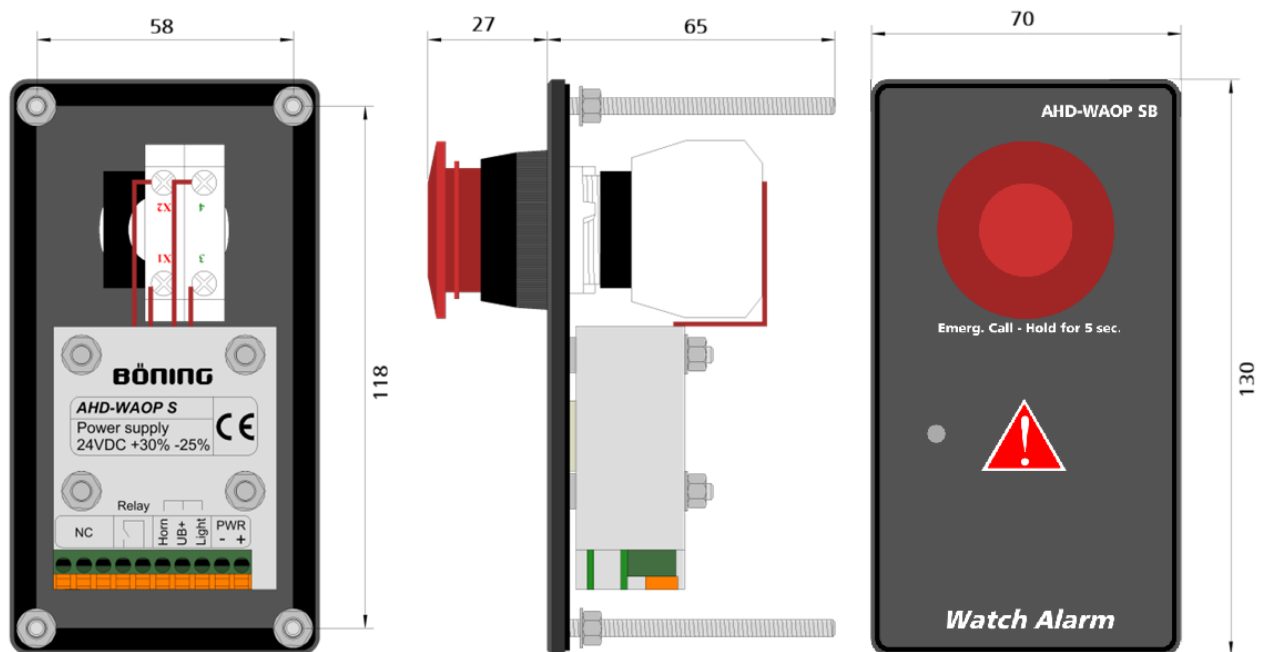

Additional alarm and acknowledgment panels are available as accessories for Böning watch alarm systems compliant with BNWAS (AHD-WAOP / AHD-WAOP K). These are integrated into the existing watch alarm system and can perform specific functions depending on the device. All additional devices can be combined with both AHD-WAOP and AHD-WAOP K.

AHD-WAOP SB is an alarm panel with an emergency call function for use on bridges. It signals active alarms in the guard duty system and simultaneously offers the function to trigger an emergency call.

This is done by pressing the integrated mushroom-head button for at least 5 seconds.

For glare-free use in bridge areas, the device is equipped with automatic dimming.

Dimensions

Technical Specifications

Power supply	24 V DC (+30% / -25%)
Current consumption	Max. 250 mA (24 V DC)
Ambient temperature	-15°C...+70°C
Storage temperature	-50°C...+85°C
Weight	Approx. 0.4 kg
Protection class	IP 65 (front) IP 20 (rear)
External dimensions (mm)	70 mm x 130 mm x 65 mm
Panel cutout	59 mm x 107 mm
Interfaces	1 x External buzzer 1 x External optical signal 1 x relay (NO)
Part Number	14712
