

Cut Call Time & Accelerate Patient Care

seeQer

eMedBV Solution

For patients that need specialty medications, every minute counts. For one careviso client, **traditional benefits verification was taking 60-75 minutes per case**, often requiring multiple phone calls and manual follow-ups that delayed access to care.

Since using seeQer, careviso's eMedBV solution, the client has now **reduced phone call time to just 15-30 minutes**, delivering faster, more accurate results.

The impact is clear:

- Up to 75% reduction in phone call time per case
- Fewer manual touchpoints with payors
- Faster time to therapy, helping patients start treatment sooner
- Seamless patient and provider experience, rapid communication

With seeQer, your team can spend less time on the phone and more time making an impact for your patients and customers.
