

Proficiency Testing Group

Proficiency testing provider no. 7014 accredited by ČIA

according to ČSN EN ISO/IEC 17043:2010

Information on Programme PT/EBP/2026

Dear testing laboratory employees,

We invite you to participate in the **PT/EBP/2026** proficiency testing programme, which is designed as an interlaboratory comparison. The programme is intended for testing laboratories that perform tests on solid fossil fuels. The aim of the programme is to demonstrate the competence of accredited and non-accredited laboratories, including verification of the measurement uncertainties used.

PT Programme

The subject of the **PT/EBP/2026** programme is determination of

- loss on ignition,
- carbon content,
- chlorine content and
- mercury content.

Test Items

The test items will be two analytical samples of energy by-products (slag and fly ash).

The test items will be prepared by an external provider in a testing laboratory. The homogeneity and stability of each set of items will be verified, and the necessary analyses will be performed by an external service provider in an accredited testing laboratory. The SZZ is fully responsible for these services.

PT Programme Organization

- The deadline for sending applications is **January 30, 2026**.
- Two items of about 25 g each will be sent by mail with detailed instructions by **February 12, 2026**. Other delivery methods can be arranged.
- The tests will be conducted and the results delivered by **March 23, 2026**.
- Participants will receive an electronic version of the draft final report by **April 27, 2026**.
- Participants may submit their comments on the draft final report by **May 5, 2026**.
- The final report will be sent to participants electronically by **May 20, 2026**.
- Each participant will receive a printed certificate of participation along with an individual performance evaluation.
- Participants may use any methods they normally use. Separate evaluation of results by method is only possible if there are sufficient results for a given method; otherwise, this will be considered in the comments on the results.
- It is not an obligatory requirement to determine all characteristics or all items in the program. However, the fee remains the same in such cases.
- If items are not delivered on time according to the schedule, please file a complaint with SZZ.
- All participants shall act independently and avoid any behaviour that could be interpreted as coordination or collusion.
- Each participant will receive only one set of items and may submit only one set of results.
- Once the draft report has been published, the results received cannot be changed nor deleted.

Results and evaluation of the PT programme

The results of the PT programme evaluation will be included in a summary final report. This report will publish the following information from participants: laboratory number, experimental data and their uncertainties, and additional information. Participants from the Czech Republic and Slovakia will receive all documents in Czech, while participants from other countries will receive them in English. The deadline for appealing the summary final report is **June 19, 2026**.

In accordance with the requirements of ČSN EN ISO/IEC 17043, statistical methods according to ČSN ISO 13528 will be used to evaluate the participant's performance, with the evaluation of performance according to z-score or z'-score. The result is considered satisfactory if $|z'_i| \leq 2$, questionable if $2 < |z'_i| < 3$, otherwise unsatisfactory. A suitable robust mean value characterizing the given distribution of the set of laboratory results will be used as an assigned value. In the event of a low number of laboratories, Horn's procedure will be used. The differences will then be compared with the standardized values for reproducibility according to the standards:

- **ČSN ISO 1171 Coal and coke** – Determination of ash.
- **ČSN ISO 29541 Solid mineral fuels** – Solid mineral fuels – Determination of total carbon, hydrogen and nitrogen content – Instrumental method.
- **ČSN 44 1393 Coal and lignite**. Determination of mercury.
- **ČSN ISO 587 Coal and coke** – Determination of chlorine using Eschka mixture.

Application

The criteria for participation are the timely submission of a complete application by **January 30, 2026**, agreement with the terms and conditions in the application, and the participation of a minimum of 7 laboratories. Please send your signed application electronically to szz@orgrez.cz. The application form and other information about proficiency testing programs can be found at <https://www.orgrez.cz/en/laboratore/proficiency-testing-of-testing-laboratories>.

Participation Fee

The fee for participation in the **PT/EBP/2026** programme is **CZK 11,900** excluding VAT. Transportation costs and any applicable taxes and other fees are not included in the fee and will be added according to actual costs. If you are interested in quality control materials, the fee is **CZK 590** excluding VAT per sample. Each participant will receive an invoice after the completion of the program. Payment in EUR will be charged according to the current CZK/EUR exchange rate on the date of invoice issuance. If you need to issue an order, please specify the date of **May 20, 2026**, or later for invoicing purposes.

Privacy Policy

ORGREZ, a.s. processes personal data of business partners in accordance with Regulation (EU) 2016/679 of the European Parliament and of the Council of 27 April 2016, effective on 25 May 2018, on the protection of individuals with regard to the processing of personal data and on the free movement of such data and repealing Directive 95/46/EC (GDPR) information on the processing of personal data of business partners is available on the website of ORGREZ, a.s., (<https://www.orgrez.cz/en/gdpr>).

Wishing you successful cooperation

Michal Petrák – coordinator of the Proficiency Testing Group
